

# A Side-By-Side Comparison of Orthodox Treatments and Alternative Treatments

by R. Webster Kehr  
Independent Cancer Research Foundation, Inc.

Chemotherapy and Radiation	Alternative Treatments
Kills far more normal cells than cancerous cells	All alternative treatments selectively kill cancerous cells, either directly or indirectly, and do no harm to normal cells
Severely damages the immunity system	Most alternative treatments are designed to build the immunity system, but no alternative treatment damages the immunity system
Can destroy key organs, such as the liver, heart, kidney, etc., leading ultimately to irrevocable death	Do not damage any key organs, in fact is more likely to strengthen them as long as patients take recommended dosages of the treatment
People die of malnutrition caused by chemotherapy and radiation	No alternative treatment damages the gastrointestinal system. No alternative treatment makes you so sick you don't want to eat or cannot hold food down. Most alternative treatments contain highly nutritious foods exclusively
People die of infectious diseases caused by a weakened immunity system	As mentioned, most alternative treatments are designed to build the immunity system, thus protecting against infectious diseases
Chemotherapy is so dangerous and ineffective it requires surgery to cut-out sections of the body with dense amounts of cancer cells in order to put a person into "remission"	Alternative treatments do not depend on surgery because they can treat both dense concentrations of cancer cells and less dense concentrations of cancer cells
There is absolutely no scientific evidence orthodox treatments extend the lives of patients, compared to no treatment at all (for the vast majority of types of cancer)	There is overwhelming scientific evidence alternative treatments extend the lives of patients, even to the point of extending the lives of people sent home to die by orthodox medicine.
Orthodox medicine contains massive amounts of deceptive terminology, deceptive comparisons and	No need to be deceptive, nor to suppress the truth about orthodox medicine, in fact the more people know about orthodox medicine, the better it is for alternative medicine

deceptive statistics and has a long history of suppressing the truth about alternative medicine	
Can do significant damage to DNA	No known damage to DNA by alternative treatments as long as people take recommended dosages, in fact some treatments protect the DNA of patients due to antioxidant properties
Causes immense pain and sickness, and a host of other side effects, so much so that many people drop out of chemotherapy and would rather die than continue their treatments	No pain or suffering is ever caused by an alternative treatment. If the cancer, or prior orthodox treatments, cause pain, alternative treatments frequently reduce the pain and sickness within days or weeks
Vitamin C therapy has been scientifically proven to be far superior to chemotherapy and radiation	Vitamin C therapy is not even in the top 100 alternative treatments, it is used only to extend life so far better treatments have longer to work
Orthodox treatment patients who have gone into remission have had their immunity system so destroyed that it is highly likely they will relapse out of remission and later die of cancer or the treatments	Alternative treatment patients who have gone into remission have had their immunity system built up by treatments, and they have had their cancer cells selectively killed, thus decreasing the probability of relapse
Orthodox treatment patients who have gone into remission have not had the cause of their cancer treated, only the symptoms, and have little idea how to make sure they will not relapse	Alternative treatment patients who have gone into remission have had their immunity system built up by treatments, and they have a good idea of what caused their cancer and what kind of diet to go on to decrease the probability of relapse
Orthodox treatments work far better for early stage cancers, and do an overall very poor job treating late stage cancers that have metastasized	Unless the cancer or chemotherapy or radiation destroyed one or more vital organs, several alternative treatments work almost equally well whether the cancer is detected in an early stage or in a late stage. These programs work without the immunity system.
Patients would be better off to "Refuse All Treatments" than to take chemotherapy	Patients would be worse off to "Refuse All Treatments" than to take the proper alternative treatment for their situation because alternative

because of the damage done to normal cells, damage to the immunity system, etc.	treatments build the immunity system, selectively kill cancer cells, etc.
The more facts, and less propaganda, you learn about orthodox medicine, the less likely you will ever subject yourself to their treatments	The more you learn about alternative treatments for cancer, the more likely it is that you will choose alternative treatments <b><u>instead of</u></b> orthodox treatments
