

# Inexpensive Cancer Treatments

by R. Webster Kehr  
Independent Cancer Research Foundation, Inc.

Even though these cancer treatments are very inexpensive, do not assume they are not effective. These treatments are a very significant part of the vast arsenal of cancer treatments every cancer patient should be familiar with.

For example, you will note in studying this website that many of the most potent cancer treatments contain at least one of these four items:

- 1) Cesium (e.g. cesium chloride), (very alkaline)
- 2) Baking Soda, Sodium Bicarbonate or  $\text{NaHCO}_3$  (very alkaline)
- 3) Calcium (e.g. coral calcium) (very alkaline),
- 4) Vitamin C

**The treatments on this page are rich in these items!!**

As a general rule, when you are using more than one alternative cancer treatment, take them at least an hour apart, if possible. Sometimes this is required.

## Introduction

Did you know that the AVERAGE orthodox cancer treatment costs \$350,000??

The average alternative cancer treatment costs about \$2,000 or less, and is 33 times more effective than any orthodox treatment.

So why do insurance companies gladly pay for orthodox cancer treatments and refuse to pay for alternative cancer treatments? Guess who is in bed with whom. There is a lot of financial incest between the ownership and leadership of large insurance companies and the medical cartel.

Many cancer patients are broke after going on orthodox treatments. Many others live in poor countries. Many others are on Social Security. And so on.

The truth is that many people need alternative cancer treatments that are virtually free.

Here is a list of alternative cancer treatments which are among the least expensive on earth. Actually, many of them are free. One costs about \$3.00.

---

**USE SEVERAL OF THESE TREATMENTS!!**

---

## **The Most Potent of the Inexpensive Treatments**

### **The Bill Henderson Protocol (less than \$150 a month)**

This treatment uses the Budwig Diet at its base, but adds a number of important supplements to it. If you buy Bill's book you can get telephone support. This is a very superb cancer treatment. See:

[Bill Henderson Protocol](#)

### **Brandt Grape Cure (free)**

This treatment is free because the grapes replace your normal foods. Many people do not have access to red, purple or black grapes, but for those that do, this is a superb treatment:

[Johanna Brandt Grape Cure](#)

### **Brandt Grape Cure using vegetable juices instead of grape juices (free)**

This treatment is also free because the vegetable juices replace your normal foods. See the Brandt Grape Cure article mentioned above, but use vegetable juices

**instead of** grapes:

[Raw Food / Vegetable Juice Drinks](#)

### **Oleander treatment (free + about \$10 for the book)**

If you live in a state or country where the oleander plant grows wild, this treatment is free. The book that tells you how to make it costs about \$10. It is a VERY potent treatment, but does take time to prepare correctly. See this article:

[Oleander Treatment For Cancer](#)

### **Bob Beck Protocol (ONE TIME COST of between \$250 and \$800)**

There is an up front cost to this electromedicine equipment, but the equipment can be used over and over again.

In many cases, the reason a person has cancer is that their immune system has been suppressed. Perhaps the main reason immune systems are suppressed (other than chemotherapy) is microbes. Microbes block the ability of the immune system to communicate and create neuropeptides (e.g. interferon).

The Bob Beck Protocol is one of the most potent of all cancer treatments, however, it cannot be used by a lot of people because they are on potent prescription drugs, so it is frequently not used until a patient is in remission and off of their potent prescription drugs.

If you buy the equipment, it costs about \$800, but if you build it yourself, or have a friend build it, it is much cheaper. See:

[Bob Beck Protocol](#)

### **Protocel (About \$75 a month)**

Protocel is an outstanding cancer treatment by itself. However, it is not potent enough for fast spreading cancers, such as glioblastomas. It can be combined with many

other alternative cancer treatments, but not all. See this article:  
[Protocol or Cantron](#)

### Simoncini Treatment (\$3 for the entire treatment) (Baking Soda)

**Very Important Note: USE ONLY** baking soda which is stated to be "aluminum free" (e.g. Bob's Red Mill Baking Soda) **OR** is pharmaceutical grade baking soda.

This treatment was developed **by an oncologist** in Italy and uses Baking Soda. The rest of this section are general comments about the treatment sent to me by an associate of Dr. Simoncini:

For **mouth, stomach, intestinal, rectal, oral cancers** (if not infiltrated), they should take 1 TEAspoon with glass of water in the morning and 1 in the evening every day for one month. Cancer should be cleared.

**NOTE:** In most cases the Simoncini treatment requires medical help in the form of injections or IVs. However, in the case of mouth, stomach, intestinal, rectal and oral cancer (which may include throat cancer) this highly effective treatment can be used by simply putting baking soda (without aluminum) in a glass of water. TAKE THIS SERIOUSLY IF THIS APPLIES!! The "Vitamin C and Baking Soda" treatment discussed below will likely also help these kinds of cancer!!

For most other types of cancer, an infusion of 500CC with 5% bicarbonate of soda in the vein, every day for 6 days, then 6 days with nothing, and so on until 24 total infusions. After that check with a scan whether cancer is cleared.

Dr. Simoncini's book is now available in English. See this website:  
[To Order Dr. Simoncini's Book in English](#)

Here is an article which links to other Simoncini websites:  
[A Short Article on Simoncini](#)

### Cancer Diet

This treatment is free because it is simply the foods you eat. It consists of a highly alkaline diet and zero acidic foods (e.g. NO soda pop of any kind).

It is not really a treatment, but it is very effective at slowing down and stopping the spread of cancer. It can easily be combined with any of the other treatments on this page, **and should be combined with them!!** See:  
[Cancer Diet !!!](#)

### Robert Barefoot Calcium Protocol (includes Calcium and Cesium)

See:  
[Article on this protocol](#)

### Robert Barefoot Cesium Chloride Protocol (includes Cesium and Calcium)

See:  
[Article on this protocol](#)

## Dr. Matthias Rath Cellular Solution (includes Vitamin C)

This treatment does **NOT** apply to leukemia and other cancers of the blood. This is a treatment for when there is a mass of cancer cells.

See:

[Article on this protocol](#)

---

**Note: Also see the list of treatments on the home page of the Cancer Tutor website. Most of them are very inexpensive.**

---

## Treatments With Potential, But Less Evidence

### Flavonoid Cancer Treatment Protocol

This is a simple cancer treatment out of Europe. Flavonoids have been used in cancer treatments for several years, but this is the first protocol I have seen using them:

Here is the website:

<http://www.treat-cancer.nl/>

### Chlorine Dioxide (\$20 a year)

In mid 2007, a new treatment for malaria and AIDS was made public. The treatment had been around for several years but for a variety of reasons none of the cancer researchers knew about it.

The treatment is chlorine dioxide. While this treatment was designed for viral diseases, it should be kept in mind that cancer is a microbe-caused disease. The main difference between cancer and other viral diseases is that there is a microbe or microbes inside the cancer cells.

For this reason, the chlorine dioxide treatment is not yet considered a true cancer treatment. However, it is critical to remove microbes from the body in order for your immune system to be supercharged. Thus, this treatment, even though it was designed for malaria, should be considered a cancer treatment inasmuch as it helps build the immune system (in more ways than one).

**However, it IS considered a treatment for melanoma and squamous cell carcinoma!!** The reason is that these kinds of cancer spread via the bloodstream. Thus, chlorine dioxide may stop these cancers from spreading. See this article: [Melanoma and Squamous Cell Carcinoma](#)

This treatment is not suited for fast growing cancers or advanced cancers (other than melanoma, squamous cell carcinoma or leukemia) because it works by building the immune system, which is a slow process.

## Chlorine Dioxide - DMSO (\$40 a year)

This treatment uses the chlorine dioxide as above, but adds DMSO to the chlorine dioxide. It is known that chlorine dioxide and DMSO bind together and that the DMSO targets cancer cells. The key question is how effective the chlorine dioxide is when bound to DMSO. This question is critical for cancer because the microbes which cause cancer are inside the cancer cells.

Here is the article:

[Article on Chlorine Dioxide - DMSO Protocol](#)

## Sister Mary Eymard Poydock, PhD Treatment (about \$40) (includes Vitamin C)

**If your cancer includes a significant tumor(s), include this protocol as part of your treatment.**

This treatment is the result of decades of cancer research by Sister Mary Eymard Poydock, Ph.D., director of cancer research and former professor of biology at Mercyhurst College in Erie, Pennsylvania.

Twenty years of painstaking work by Sister Eymard and her associates have indicated that a combination of vitamins C and B12 (or B 12) have a powerful effect against cancer.

Sister Eymard stated: "We've got it down to a point now where, if you do it according to the 'recipe,' it will work every time."

The "recipe" is a mixture of vitamins C and B12 (in a ratio of one part B12 to two parts C) near the site of the tumor transplant.

She also wanted to see if the C-B12 mixture would prolong the lives of animals already suffering from cancer. To find out, Sister Eymard and her colleagues injected the mixture near the cancerous growths of diseased mice for seven successive days.

Treated animals lived longer than those mice not given C and B12. In fact, all the treated mice outlived the control group. It appeared that the combination of C and B12 not only inhibits the growth of cancer cells, but also prolongs the lives of animals impregnated with cancer.

This treatment should not be used by itself, but it would be wise to combine this treatment with other treatments which allow antioxidants.

See also:

[For More Information](#)

This is an excellent source of Vitamin B12 which is highly absorbed:

<http://www.worldwidehealthcenter.net/category.php?prod=772> (USA) and

<http://www.seeknatural.co.uk/product-1123.html> (UK and Europe).

## Dandelion Root Treatment (free)

Probably everyone on earth has too many dandelions in their yard. Yet the root of this plant is a potent cancer treatment. However, it can be difficult to make. See this

article:

[Dandelion Root Cancer Treatment](#)

### Curcumin Spice (about \$4 a month)

This is not a real treatment, however, curcumin spice is known to be a potent cancer treatment. It targets cancer cells, among other things.

I would start slowly by adding the spice to one food, once a day; then build up until your stomach can handle adding it to just about everything you eat.

### Hydrogen Peroxide (about \$5 a month)

This treatment requires you buy **FOOD GRADE** hydrogen peroxide. Use Google this way:

"food grade" "hydrogen peroxide" 35%

**35% food grade hydrogen peroxide is VERY dangerous to handle. Keep away from children.**

**I want to emphasize very strongly that you should not use any type of hydrogen peroxide unless it is "Food Grade". The junk you buy at grocery stores and most health food stores has toxic chemicals added to it and is for EXTERNAL USE ONLY. Cancer treatments should not involve this stuff under ANY circumstances.**

The dosage is as follows (use distilled water):

Days 1, 2 & 3) 5 drops of 35% **FOOD GRADE** hydrogen peroxide in 12 ounces of water - 3 times a day,

Days 4, 5 & 6) 10 drops of 35% **FOOD GRADE** hydrogen peroxide in 12 ounces of water - 3 times a day,

Thereafter) 18 drops of 35% **FOOD GRADE** hydrogen peroxide in 12 ounces of water - 3 times a day,

If you start to have significant stomach problems (**excluding** nausea, which is common), discontinue the treatment and build up more slowly.

Hydrogen peroxide can also be delivered via a room vaporizer. Simply mix enough hydrogen peroxide with the distilled water to make a 3% solution. This method should only be used when a person cannot take the H<sub>2</sub>O<sub>2</sub> in a glass of water.

See this article for more details:

[Hydrogen Peroxide Information](#)

### Vitamin C and Baking Soda (about \$15 a month) (Vitamin C and Baking Soda)

**Very Important Note: USE ONLY** baking soda which is stated to be "aluminum free" (e.g. Bob's Red Mill Baking Soda) **OR** use pharmaceutical grade baking soda.

This is an absolutely superb cancer treatment. It is mainly designed for people who have cancer of the digestive tract: including everything from throat cancer to colon cancer, rectal cancer, or colorectal cancer and cancer of the small intestines.

Here is an article on this protocol:

[Vitamin C and Baking Soda](#)

### **Vitamin C and DMSO (about \$15 a month) (includes Vitamin C)**

This treatment cured a melanoma case I am familiar with, though for melanoma a cancer patient should also use the Chlorine Dioxide - DMSO Protocol. Exactly why this treatment works is not known.

Here is an article on this protocol:

[Vitamin C and DMSO](#)

### **Chelating Items - Zeolites and/or Vitamin C and/or Chlorella (includes Vitamin C)**

There are several things that can severely suppress your immune system from functioning. One of them is microbes, mentioned above with regards to the Bob Beck Protocol.

However, another cause may be just as important - heavy metals. Heavy metals (i.e. dental amalgam, vaccinations, etc.) can severely suppress the immune system. Heavy metals are removed from the body by chelation. A chelating item is an item which binds to a heavy metal and carries it out of the body.

If your immune system is suppressed because of heavy metals three products may be exactly what you need.

First, is Vitamin C, mentioned elsewhere in this article. However, in this case we are talking about 15 to 20 grams a day for someone who weighs 175 pounds (use a dose proportional to your weight). You have to build up to these kinds of doses or you will get diarrhea.

The advantage of Vitamin C is that it also can kill cancer cells. Thus, it can accomplish two things. Be sure to combine it with DMSO.

Another option is a product called HMD that is designed to chelate metals and has been tested scientifically – see [www.detoxmetals.com](http://www.detoxmetals.com)

The third product is a single-celled plant called chlorella. It is also a superb chelating item. Here is an article:

[Article on Chlorella](#)

### **Iodine**

Iodine was used in three of the most famous cancer treatments, the Hoxsey (potassium iodine), the Gerson and the Moerman. However, it has also been used by itself, no doubt with higher doses. This is a quote from an email I received:

- *"The dosage we were recommended was 10 drops of 7% iodine tincture in an 8-oz glass of water three times a day for the 1st day, going up a drop a day. They usually quit when they reach 30, 35, or 40 drops.*

*Some go back down the same way they went up and do not quit suddenly.*

*The woman who told me about it said the information she was given said you would have a clear feeling in your stomach when you had enough. She verified that she had experienced this as well. I've heard that the cancer disappears."*

Here are some websites:

<http://www.helpmythyroid.com/>

<http://www.drbrownstein.com/>

Here is another email I received, this one from a health practitioner:

- *"I use a urine test through Dr. Flechas' lab to determine iodine deficiencies, though I've never varied the dose as your protocol suggests. The research Dr. Flechas, Dr. Brownstein and another Dr., Guy Abraham, shows that the body needs two kinds of iodine. Iodine, the I<sub>2</sub> molecule, and iodide, the I<sup>-</sup> molecule. Different tissues in the body use different forms. Iodine, in addition to being used for making thyroid hormone, is used in the structure of hormone receptors on all cells for all hormones in the body. Iodine deficiencies can therefore result in less efficient hormonal communication in the body, and be a contributing cause or the root cause of hormonal resistance in hypothyroidism and diabetes.*

*The form of Iodine I've been using is a tablet form of the older Lugol's iodine solution. Lugol's was a liquid that combined Iodine and potassium iodide. It caused stomach upset in a fair number of patients, and dosage control was difficult. Iodoral is a tablet form of these same types of iodine, and is in a time-release matrix, which seems to eliminate the stomach upset side effects and makes dosage control easier.*

*I could easily see how cancer's that are hormonally mediated could be helped by adding iodine. Breast, uterus, ovary and prostate cancers are all associated with iodine deficiencies. I test for iodine deficiencies in all cancer patients."*

### **Comment About Iodine**

We have not personally recommended this treatment very much because it requires a knowledge of how to diagnose iodine toxicity. If you use this treatment, you need to work with someone familiar with iodine toxicity.
