

# Treatment For Stage I, II and III Cancer Patients

by R. Webster Kehr  
Independent Cancer Research Foundation, Inc.

## Important Notes

### Note #1: Prescription Drugs and Over-The-Counter Drugs

If you are on ANY prescription drugs, or even over-the-counter drugs, such as aspirin, you should check with your pharmacist or doctor to see if there is a conflict with any natural foods or natural supplements. A conflict can occur when one substance **interferes** with another substance or when one substance **enhances** the effectiveness of another. For example, **enhancing a prescription drug or over-the-counter drug can be just as dangerous as blocking their actions.** It is impossible for a small website such as this one to keep track of all possible conflicts. This is especially important for drugs that are being used as heart medications, such as hypertension drugs or blood thinners. For example, there is one combination of orthodox drugs and alternative medicines that can be fatal: combining tranquilizers with hydrazine sulphate.

### Note #2: Dealing With Tumors

Alternative cancer treatments are far more interested in killing cancer cells, or reverting them to normal cells, than in shrinking tumors. If you kill all of the cancer cells in a tumor then the tumor is not dangerous to your health.

However, if a tumor is pressing on another organ, is blocking the flow of fluids, is a cause of extreme pain, is in a dangerous location, etc. it obviously would be wise to consult with a surgeon. Some alternative treatments do shrink tumors, but none of them do it immediately.

If you want more information about tumors, see:

[Article on Shrinking Tumors](#)

### Note #3: Pregnancy and Cancer

For those women who are pregnant, who may be pregnant or who may become pregnant, it is important to read this article:

[Article Regarding Pregnancy and Cancer](#)

### Note #4: For Those On a Very Limited Budget

For those on a very limited budget, also see this article on inexpensive cancer treatments:

[Inexpensive Cancer Treatments](#)

## Understanding the Treatment of Stage III Versus Stage IV Cancers

Before diving into the actual treatment of Stage III cancer, which will be done later in this article, it is first necessary to provide a "big picture" of what is going on.

First of all, it is necessary to understand that this website does not "rate" cancers the

same way orthodox medicine rates cancer. Orthodox medicine has a huge and complex way of rating whether a cancer patient is Stage I, Stage II, Stage III or Stage IV (and actually there are sub-categories such as Stage IA).

This website also rates cancer as Stage I, Stage II, Stage III and Stage IV, however, on this website the stages are rated on the danger of the situation. As an extreme example, a cancer patient who has been sent home to die, whose liver is severely damaged and has severe lung congestion would be rated a "Stage IV" patient by this website, no matter how orthodox medicine would rate the person.

On this website a "Stage IV" patient is defined to be someone who needs the strongest possible alternative cancer treatments in order to have a chance of survival.

Likewise, a "Stage IV" treatment is one that is among the strongest possible alternative cancer treatments.

Cancer can be compared to a house fire. It is the **spreading** of the cancer that kills cancer patients. Likewise, it is the spreading of a fire that destroys buildings.

There are exceptions, of course. For example, pancreatic cancer can kill a person even if it does not spread. But in general it is the spreading of cancer that kills cancer patients.

More will be said about rating cancers in a moment. For now, it is sufficient to understand that this website will rate cancers based on their danger, not on how orthodox medicine rates them.

It is also important to understand that a "Stage III" treatment should be used for a "Stage III" cancer, though obviously a "Stage IV" treatment could be used for a "Stage III" cancer.

Another huge difference between treating a "Stage III" cancer and a "Stage IV" cancer is the focus of the treatment. A "Stage IV" patient has, by definition, a potentially very short time to live or is dealing with a very dangerous type of cancer (e.g. squamous cell carcinoma). Many of them have had extensive orthodox treatments, etc. Thus, the focus of a "Stage IV" treatment is killing the cancer cells - period. There is little attention paid to anything else because the patient is in a survival mode.

On the other hand, a "Stage III" patient is still in good health and has, by definition, many months to live. The focus of a "Stage III" treatment can focus on building the immune system, protecting the liver, detoxifying the body, killing the fungus associated with cancer, and other things. Several of the things associated with a "Stage III" treatment (and a "Stage IV" treatment) are involved with "buying time" for the patient to live, so the treatment has more time to work, though these treatments are not always identified as such.

Virtually every alternative cancer treatment involves about a dozen different key items. However, at the core of any alternative treatment is the treatment or treatments that are most depended on. They are the treatments that, by themselves, are doing most of the work treating the cancer.

At the core of a "Stage IV" cancer are one or more "Stage IV" treatments. These are very potent treatments that are capable of giving a Stage IV cancer patient a fighting chance

of curing their cancer.

At the core of a Stage III treatment is one "**Super** Stage III" treatment **or** multiple "Strong Stage III" treatments. A "**Super** Stage III" treatment is a very strong Stage III treatment. These are typically treatments that have been around for several years.

A Stage III treatment and a Stage IV treatment may look somewhat similar, but a Stage IV treatment **IS REQUIRED** to have at its core **ONLY** high levels of the most potent treatments known to be effective against Stage IV cancer. It may contain other items, but it is centered and focused on the very potent items, such as cesium chloride.

One of the key things it is important to learn in treating cancer is that using 10 treatments that can treat Stage III cancer, but are not strong enough to be at the core of a Stage IV treatment, will have a very low cure rate for Stage IV cancer. When thinking about a house on fire, a Stage IV treatment is a "fire hose," whereas a "strong Stage III" treatment is a "garden hose." You cannot put out a raging house fire with 10 garden hoses. It requires at least one fire hose (i.e. at least one "Stage IV" treatment).

### **MONITOR YOUR PROGRESS!!**

A critical part of knowing whether your alternative cancer treatments are strong enough to win the battle against cancer is to measure your progress.

As soon as possible after starting your cancer treatment, you need to determine exactly how much cancer there is in your body. Likewise, from time to time during your treatment you **must know** what progress has been made in reducing the amount of cancer in your body.

Fortunately, there is an easy way to evaluate how much cancer there is in your body. The test was designed by the late Dr. Navarro of the Philippines and is now administered by his son.

It is a urine test which returns to you a number, generally between 30 and 70. A '49' or below means you do not have cancer (statistically speaking). A '50' or above means you do have cancer (statistically speaking).

Some people will want to evaluate their progress every 8 weeks, others every 12 weeks, and so on. Stage III alternative cancer treatments generally do not show results within the first 8 weeks, but if the number goes up, that may be a sign you are not using a strong enough treatment and you may need to switch to a Stage IV treatment.

Here is information about how to determine how much cancer you have in your body:  
[How To Determine How Much Cancer You Have](#)

### **Details On When To use a "Stage IV" Treatment**

**Stage IV cancers**, according to this website, are defined to include:

- 1) Advanced cancer patients, meaning those whose cancer has spread throughout their body (e.g. the cancer has spread to the bones, lungs, liver, pancreas **or** brain), or
- 2) Cancer patients with fast growing cancers or fast growing tumors, or
- 3) Cancer patients with high fatality cancers (e.g. lung cancer, pancreatic cancer, multiple myeloma, squamous cell carcinoma, melanoma, etc.), or

- 4) Any type of bone cancer, or
- 5) A person has had extensive chemotherapy and/or radiation therapy, or
- 6) Any swelling or inflammation of a tumor could cause a blockage of key fluids, or
- 7) A person has an estimated one year to live or less, or
- 8) Any other situation where orthodox medicine rates it as Stage IV.

In addition to these criteria, a person who is very weak from their cancer treatment or their cancer needs to eat meat and other normally forbidden foods. These people need the Stage IV treatment because they need a treatment strong enough to be effective when a person is not on a "strong" cancer diet.

**Note:** This article is for Stage I, Stage II and Stage III cancer patients. However, Stage I, II and III cancer patients should, at their leisure, also read the "Stage IV" article since it goes into far more detail about specific situations and types of cancer.

Here is the Stage IV article for those who are "Stage IV" according to this section:

[The Treatment For "Stage IV" Cancer Patients](#)

### **Brain Cancer Patients Read This Carefully!!**

**Any brain cancer patient on ANY cancer treatment, whether orthodox or alternative, needs to carry with them at all times anti-seizure medication. They also need to be with a person at all times who knows how to use the anti-seizure medication!!**

The reason is that virtually ALL cancer treatments, whether orthodox or alternative, kill cancer cells and in the process of doing this will create an inflammation in the brain (Note: chemotherapy does not cross the Blood-Brain Barrier, but radiation does). This inflammation is one of several things that can cause brain swelling and seizures.

**If you are dealing with swelling or pressure of any kind in your brain, immediately deal with an oncologist or surgeon. Let them make decisions about relieving the swelling or pressure. Do NOT depend on alternative cancer treatments to work fast enough to deal with swelling or pressure inside the skull.**

Note: You are "Stage IV" if you qualify as a "Stage IV" patient in the above list **OR** you have ONE or more of the following:

- 1) Glioblastoma, or any form of it,
- 2) Another fast growing brain cancer,
- 3) A tumor is in a dangerous location,
- 4) A high mortality rate brain cancer,
- 5) Dangerous swelling (see your oncologist first),
- 6) Stage IV brain cancer,
- 7) Stage IV any other kind of cancer in addition to brain cancer

Regardless of whether you are a Stage III or below brain cancer patient, or a Stage IV patient, you might want to look at the special article on brain cancer to help you fine tune your options:

[Brain Cancer Article](#)

### **Key Issues Related to the Cancer Diet and the Cancer Treatment**

This section applies only to Stage III cancer patients because the Stage IV cancer

patients begin their treatment in a different way.

Now that we are talking about the real treatment, it is necessary to talk about how the "cancer diet" and the "cancer treatment" fit together.

The "cancer diet" on this website is compliant with the Robert O. Young diet in the book [Sick and Tired?](#) although the diet on this website is not as detailed as his. There are some exceptions to his diet because his diet is very generic, but the exceptions are noted in the article and the reasons for the exceptions are noted as well. Here is the cancer diet:

[The Cancer Diet](#)

His diet is designed to rebuild the person's "Inner Terrain" to kill or neutralize microbes, and thus their mycotoxins. It does this by controlling the pH of the foods that are consumed (this is a naive explanation, but it gets a key point across). The inner terrain he talks about is necessary for cancer to develop. You can read about how cancer develops in this article:

[The Theory of Cancer](#)

A bad inner terrain allows yeast, fungus, mould, bacteria, etc. to thrive and leads to cancer. **By including his diet as part of a cancer treatment we are treating the CAUSE of cancer.**

Why is this important? Answer this question. Suppose you are fighting a house fire and someone starts pouring gasoline onto the burning house. This gasoline will greatly hinder the attempt to put out the fire. Likewise, many foods, such as sugar, **FEED** cancer cells, and provide them a perfect inner terrain to thrive.

Here is an axiom you need to live by:

**AXIOM: NO CANCER TREATMENT WILL BE MORE EFFECTIVE THAN THE CANCER DIET!!!!**

Memorize that axiom!!

If the cancer diet on this website is too restrictive for your tastes, then buy the book by Bill Henderson and use his cancer diet (it is a very good book, by the way):

[Bill Henderson Website](#)

Most alternative cancer treatments do not treat the cause of cancer, they treat the symptoms of cancer, meaning they only treat the cancer cells. Not even the great Rife Machine dealt with the cause of cancer. This treatment will not only deal with treating the cancer cells, but it will also deal with treating the cause of cancer.

With most alternative cancer treatments, when you have finished the treatment, you have not touched the cause, thus you are ripe for a recurrence of cancer!!

Having said that, there are some issues.

The Robert O. Young cancer diet, and obviously the one on this website as well, forbid most fruits and some vegetables (the vegetables that contain high levels of glucose are actually allowed in moderation). However, there are some super-fruits that are superb

cancer treatments. What shall we do with them?

By definition, a person with Stage III cancer has at least a year to live. This gives us a window of opportunity to use a couple of sequential steps in treating their cancer.

The first month we will allow a little flexibility in the cancer diet (this flexibility does not CHANGE the cancer diet at all, it only adds a few VERY SPECIFIC foods that are normally forbidden, so throw your cigarettes away), but there are good reasons for doing this!

The first month of the treatment can be used to accomplish two things. First, it can act as a period to transition from a "Western" cancer-causing diet to a Robert O. Young cancer-killing diet. This is a huge transition for most people.

Thus, while a cancer patient **SHOULD STRICTLY START THEIR CANCER DIET ON DAY ONE** we can judiciously use the super-fruits (e.g. noni, mangosteen, wolfberry or goji) and other normally forbidden items mentioned below, which are excellent cancer-fighting foods or supplements, to help with the transition.

For example, a person who suddenly goes on the cancer diet can be given Noni Juice or Mangosteen to provide the "sweet" taste that the person is probably used to. **But only for the first month.**

The second reason for taking these items during the first month is to build the strength of the non-cancerous cells. Cancer cells steal energy, nutrition and glucose from normal cells. At least 40% of all cancer patients die because of the malnutrition of the **non-cancerous (i.e. normal)** cells. Thus a person with Stage III cancer will have very weak normal cells. It is important to give these normal cells a shot of very high nutrition.

For those who have been on chemotherapy or radiation, the normal cells will have been weakened and toxified by chemotherapy and radiation. This first month of building and detoxifying their normal cells is even more important for them.

Thus, all of the items in the checklists below can be used during the first month of treatment.

To summarize, the patient should start the **TREATMENT** of cancer immediately, but should modify the cancer diet during the first month only.

**However, AFTER THE FIRST MONTH the high glucose substances in the modified cancer diet should not be used, but should be replaced by low glucose substances, such as herbs.**

### **Why Some Vendors are Recommended**

When a specific brand is endorsed, three facts must exist:

**First**, there is a wide range of quality among the various manufacturers of this product (e.g. Essiac Tea).

**Second**, some of the products are worthless.

**Third**, the vendor that is recommended has been proven to have the integrity and knowledge necessary to consistently produce a high quality product.

Unfortunately, not all manufacturers of natural products have their customer's health in mind. Some are far more interested in cutting costs than in producing a quality product. Some have no clue what they are doing.

There may be instances where a person (i.e. you) feels another brand is superior to what CancerTutor recommends. That is perfectly fine, use the other brand.

### **Why Are So Many Supplements and Products Required?**

If this article sounds like a broken record, it is because there is a key point involved.

If every vendor and manufacturer in the world had absolute integrity this "Checklist" article would require only half as many supplements and products as it does. But just like orthodox medicine makes so many bad decisions in order to maximize their profits, the same thing happens in alternative medicine, it is sad to say.

Even some of the "studies" done to evaluate alternative products are designed to provide the answers desired by the group or company that funds the study. Integrity is a universal problem among "scientists."

As an example, many MSM manufacturers have silicon dioxide added to their MSM. This may destroy much of the effectiveness of the MSM product. It is seemingly little, hidden things like this, that force this website to require a large number of supplements and products.

Herbs and essential oils are perhaps the most vulnerable to incompetence and profit-making. The simple act of dehydrating an herb or other plant can virtually destroy any benefit from the herb or plant. The "blood" of the plant, which contains the very nutrients necessary to get other nutrients inside the cell membranes of the plant (and thus help get the nutrients inside human cells), are evaporated out. Do you see why some vendors are recommended?

**For many of the substances discussed below there are detailed articles on this website. Please read the detailed article if you have any questions about using the substance.**

### **Should a Stage III Patient Go On a "Stage IV" Treatment?**

There are a few "Stage IV" treatments discussed on this website that consistently deliver 50% true cure rates on cancer patients who were sent home to die by orthodox medicine.

A logical person would conclude that these treatments would deliver a true cure rate in the mid-90s for those who have not gone to orthodox medicine or have had very few orthodox treatments. This is a true statement, but it does not necessarily mean that these highly potent treatments are necessary or desirable for a Stage III patient.

First of all, all of the true "Stage IV" treatments require a person on the telephone to work you through the side-effects of any Stage IV treatment. By definition, a Stage IV cancer patient has a lot of cancer in their body and any treatment that will kill this cancer fast enough to save a person's life will create side-effects that are scary, but are not always

dangerous. This requires a person on the other end of the phone who can tell you what to expect and who can make adjustments in your treatment.

Secondly, some of the "Stage IV" treatments are more rigorous, tricky to work with, potentially dangerous, and life-altering than a Stage III patient needs to deal with.

In short, it might be best to try a "Stage III" treatment first. If the "Stage III" treatment doesn't work to your satisfaction (that is why you are monitoring your progress), then quickly switch to one of the Stage IV treatments.

### **Critical Pre-Checklist Issues**

Aside from the foods/supplements that are required for this treatment there are other items that are required.

**First**, strong family support to help the cancer patient develop and maintain a strong mental attitude. Many cancer patients who have been through chemotherapy and radiation are in such pain and misery that they have lost the will to live. Without a strong reason for living, meaning strong family support, there is little chance a person who is suffering will go through the rigor of an alternative cancer treatment.

The family should keep the patient as relaxed and comfortable as possible. The cancer patient should be frequently reminded that the family wants them to beat their cancer.

**Considerable time must be spent with the cancer patient specifically to build up their mental attitude.** Don't just walk in and hand them a bunch of pills.

Dr. Lorraine Day, a medical doctor, has added the important concept that a person should clean out their spiritual cobwebs as well (that is not the way she describes it). This means they should forgive others and read the scriptures daily, among other things.

**It is essential that the cancer patient get out of the house at least once every two days, when possible.** A "change of scenery" will break the mental cycle of depression and/or fear. As we symbolically say: "go fishing."

Also, a cancer patient should have at least 10-15 minutes of exercise a day, even if it is lifting a 1 kilogram weight up and down (this is to pump the lymph system). For people who have the health, the more exercise they can safely engage in, the better. It helps the mental attitude and it reduces stress.

A cancer patient should drink as much distilled or natural water (e.g. spring water or artesian well water) as the patient can reasonably drink, up to a gallon or more a day. Willard water and alkaline water, etc. may be even better than distilled or natural water. It is key that the water not contain any (or at most a minute amount) of chlorine or fluoride. Filtered water is acceptable as long as it removes virtually all chlorine and fluoride.

**Finally**, it is essential to nag you again about having a **STRONG** anti-cancer "cancer diet." Far too many cancer patients have died, not because their treatment was not strong enough, but because their cancer diet sabotaged their treatment. Listen carefully, a normal diet that contains foods that feed the cancer and contains foods that interfere with the cancer treatments and contains foods that do not contribute to the treatment plan **can nullify your treatment plan!!!** How can that be made any more clear!!

If you are **feeding your cancer** at the same time you are trying to kill the cancer, it is like

putting water in your gasoline tank. **THEY WILL OFFSET EACH OTHER AND THE NET RESULT MAY BE THAT NOTHING IS ACCOMPLISHED!!! Anything less than a 100% special cancer diet is playing with disaster.**

### **What To Do When Your Symptoms of Cancer are Gone**

Your Stage III treatment may cure your cancer, or it may not be strong enough to cure your cancer and your cancer may get worse. Both of these cases will now be discussed.

If you think your cancer is cured, then all of your symptoms of cancer should be gone. This is called "remission." You are **NOT** done with your treatment until you have gone on a special treatment for those in remission! This treatment is designed to kill any lingering cancer cells and build your cells up to the point you resist a recurrence of cancer. See this article:

[Article on Remission](#)

On the other hand, if your treatment does not seem to be strong enough to "put out the fire" of your cancer, then you need to move to a more potent treatment. Should this be the case you need a "Stage IV" treatment, making this next article the focus of your cancer treatment:

["Stage IV" Treatment for Cancer](#)

### **The Stage I, II, III Treatment of Cancer**

**THE REQUIREMENTS OF ALL 11 CHECKLISTS MUST BE MET WHEN POSSIBLE!!**

#### **Checklist 1 of 11**

Checklist 1 is actually split between Checklist 1a and Checklist 1b. You may choose whether to meet the requirements of Checklist 1a **or** Checklist 1b. **You should NOT choose both checklists!!** Pick one or the other, but not both.

#### **Checklist 1a of 11: Exactly ONE of the "Super Stage III" Treatments**

There are three treatments in this category:

- 1) The Brandt Grape Cure using red, black or purple grapes [actually a Stage IV Treatment],
- 2) The Brandt Grape Cure using a vegetable juice, which includes carrot juice, beet juice, and other specific juices
- 3) Amazon Factor Protocol [actually a Stage IV Treatment]

#### **1) The Brandt Grape Cure Using Red, Black or Purple Grapes [a gentle Stage IV Treatment]**

This treatment has been around since the early 1920s. It is a very well-proven treatment for cancer. This treatment can be combined with **SOME** other treatments, but not all. There is a special article on this treatment that should be the basis of your treatment.

When deciding what can and cannot be added to the Brandt Grape Cure, always

keep in mind that you do not want to interfere with how the treatment works. **Be very, very careful about adding things that are not specifically listed in the article!**

Here is the article:

[Brandt Grape Cure](#)

## 2) The Brandt Grape Cure Using a Vegetable Juice, Including Carrot Juice

Eating carrots and drinking carrot juice has been the basis of curing cancer for several decades. However, in times past most people drinking carrot juice have not understood the concept of a "juice fast," thus their treatment may not have been as effective as it could have been.

This treatment requires that you read two articles on this website. First, it is critical to understand the concept of the "juice fast." To understand how the treatment works in theory it is necessary to read the Brandt Grape Cure listed above. Essentially what you will do is use the Brandt Grape Cure for grapes, but instead of eating grapes, **substitute** a vegetable juice for the grape mush.

The second article is how to design the vegetable juice. It is important to understand that you should include the fiber of the vegetables. If you use a juicer that strips out the fiber of the vegetables, then you need to eat some whole vegetables in addition to the juice. If your juicer or food processor keeps all the fiber in the juice, then it is sufficient to drink the juice.

Always keep in mind that you do not want to interfere with how the treatment works. **Be very, very careful about adding things that are not specifically listed in the article in the Brandt Grape Cure!**

Here are the two articles:

[Brandt Grape Cure](#) [the theory]

[Designing the Vegetable Juice](#) [the juice itself]

You should **NOT** take both grapes and vegetables during the treatment, it is one of the other, but not both.

## 3) Amazon Factor Protocol [a gentle Stage IV treatment with vendor provided telephone support]

The Amazon Factor Protocol is a true "Stage IV" alternative cancer treatment, but it is both gentle and easy to take. It was designed by a PhD who learned about designing alternative medicine protocols in Japan. Tracy Gibbs, PhD, could not find an American university which taught what he wanted to learn, so he went somewhere else.

The power of this treatment is in a very special graviola plant. This plant is so high in acetogenins (this is the molecule that lowers the ATP energy in a cancer cell to the point that the cancer cell literally falls apart) that it is not necessary to extract them from the plant.

The complete protocol includes other ingredients that treat the cancer, such as keeping the lymph system clear, protecting the organs, stripping away the protein

coating of cancer cells with enzymes, etc.

A clinical study was done in Malaysia on this product. While only breast cancer patients were used in the study (obviously some of the breast cancer patients had other types of cancer as well), all the patients had been sent home to die and their cancer had already metastasized. The results of this clinical study were very exceptional.

Amazon Factor should **not** be taken with any alternative cancer treatment that is advertised as a "pro-oxidant." A pro-oxidant, such as high doses of vitamin C, will neutralize the effect of the acetogenins. Acetogenins lower ATP energy, but pro-oxidants raise ATP energy, thus neutralizing Amazon Factor. Anti-oxidants also should not be used with this product, such as products with a high ORAC rating.

Amazon Factor should **not** be used by anyone who is pregnant, who may be pregnant or who may become pregnant, because of the way it targets fast-growing cells (which may include fast-growing fetal cells).

This treatment is so simple to use I have recommended it for cancer patients who refused to go on an alternative cancer treatment and who were not on chemotherapy (i.e. I recommended to the caregiver to give them this treatment as if it were generic supplements, so the cancer patient would not know they were on a potent alternative cancer treatment). There is a cancer diet, but it is mild by comparison to some of the other cancer diets, which is another reason it can be secretly used.

This product is not available over the Internet, but information about how to telephone the company can be found on their Internet site. In other words, you have to order their products by telephone.

Here are the two key websites:

See: [Amazon Factor Protocol](#)

See: [NutraNomics Site](#)

### **Checklist 1b of 11: At Least Four of the "Strong Stage III" Treatments**

This section will describe the alternate treatment to using one of the "Super Stage III" treatments in Checklist 1a. Do **NOT** use both Checklist 1a and 1b.

I have realized over time that some "Stage III" cancer treatments are much stronger than other "Stage III" cancer treatments. This first checklist article will identify the stronger Stage III treatments. It is necessary to have at least **FOUR** items from this checklist to insure you have a sufficient number of the best Stage III treatments.

First, I will list them, then I will have a detailed discussion of each one.

### **Here is the List of Treatments in Checklist 1b (pick 4 of them)**

- 1) The Barefoot Cesium Chloride Protocol **OR** the Barefoot Calcium Protocol
- 2) Transfer Factor Plus
- 3) Protocol **OR** Cantron (will be discussed with Paw Paw) 4) Paw Paw (will be discussed with Protocol)
- 5) The Dr. Lorraine Day, M.D. diet/treatment
- 6) Wheatgrass juice and/or a quality barleygrass juice and/or SuperGreens from

InnerLight

7) Vibe liquid **PLUS** Essense Health Blend [required if patient is physically weak]

8) Hulda Clark herb combo: Black Walnut, Sweet Wormwood and Cloves

9) PolyMVA

### 1) The Barefoot Cesium Chloride Protocol OR the Barefoot Calcium Protocol

Several decades ago Dr. Carl Reich, a medical doctor, was teaching cancer patients how to go home and cure their cancer. This was not appreciated by the medical community. Fortunately, he and Robert R. Barefoot have written a book called: **The Calcium Factor: The Scientific Secret of Health and Youth**. His two protocols, which both include coral calcium, are in this book. I discuss both of them on this web site for those who cannot wait for the book to arrive.

Here are the protocols:

[Barefoot Cesium Chloride Protocol](#)

[Barefoot Calcium Protocol](#)

If you pick the Barefoot Cesium Chloride Protocol, note that it will only last about a month. **AFTER** this protocol is completed you need to switch over to the Barefoot Calcium Protocol!!

### 2) Transfer Factor Plus

The 4Life brand of Transfer Factor Plus may be the best immune building product available to cancer patients. It consists of:

Beta Glucans — polysaccharides, immune builder, anti-cancer, anti-tumor  
Maitake and Shiitake Mushrooms — antiviral, antifungal, antibacterial, cellular function (immune system)

Cordyceps — polysaccharides, sterols (immune system and many other actions)

Inositol Hexaphosphate (IP6) - anticancer

Beta Sitosterol — phytosterol (immune system and anti-inflammatory)

Olive Leaf Extract — antiviral, antifungal, antibacterial (even used for AIDS/HIV)

Vendors of 4Life Transfer Factor Plus:

<http://www.riovidaworld.com/>

<http://transfer-factor.my4life.com/>

### 3) and 4) Protocel (or Cantron) and Paw Paw [need to be discussed together]

Protocel has been proven over and over to be a superb Stage III treatment. For a few types of cancer it is even a Stage IV treatment.

Paw Paw (North American Paw Paw, **NOT** Brazilian Paw Paw, which is usually called: graviola) is a cousin of graviola, but much stronger. Paw Paw is the **ONLY** product proven to kill Multiple-Drug Resistant (MDR) cancer cells. This product is recommended for those who have been on chemotherapy.

For **lung cancer and brain cancer** patients Protocel and Paw Paw should **NOT** be taken together. They produce too much "lysing" (which is pieces of cancer cells that have fallen apart).

Also, advanced Stage III patients who have a lot of cancer cells in their bodies (especially large, concentrated sections of cancer cells) should not take Protocol and Paw Paw together.

For those with small, concentrated areas of cancer, such as prostate cancer, taking Protocol and Paw Paw together is perfectly safe.

It is absolutely required to read the articles on Protocol and Paw Paw, if you are going to take them. There are many supplements that will neutralize the effectiveness of Protocol, and a few items that will interfere with Paw Paw, and you **must** become an expert on what these things are and study the total treatment plan you put together to make sure there are no conflicts!

For example, Vitamin C, Vitamin E, selenium, etc. cannot be taken with Protocol. If you decide to go on the Calcium Protocol AND the Protocol treatment, you will note that the Calcium Protocol lists multivitamins (which usually contain Vitamin C and Vitamin E), Vitamin C and Vitamin E. You **CANNOT** take any of these things with the Calcium Protocol and also take Protocol.

In other words, you **CAN** go on the Calcium Protocol and the Protocol treatment at the same time, **but you CANNOT take all of the supplements with the coral calcium that you normally would. This is just one example, you have to carefully study the rules about what you can take with the treatments you choose.**

Here are my articles on Protocol and Paw Paw, pay close attention to the things you cannot take with them and their other rules:

(YOU MUST SEE WARNINGS IN THE PROTOCEL ARTICLE BEFORE USING)

[Main Protocol Article](#)

(YOU MUST SEE WARNINGS IN MY GRAVIOLA and PAW PAW ARTICLE BEFORE USING PAW PAW)

[Graviola and Paw Paw Article](#)

### 5) The Dr. Lorraine Day diet/treatment

As a substitute for the Raw Food diet is the Dr. Lorraine Day, M.D. diet/treatment. Her diet and treatment replace **BOTH** the Raw Food diet and the "cancer diet" on this web site. Her diet is also carrot juice based, but also includes barleygreen powder. Her diet/treatment are very detailed, see:

[Dr. Lorraine Day, M.D. diet/treatment](#)

### 6) Wheatgrass juice and/or a quality barleygrass juice and/or SuperGreens from InnerLight

The key ingredient in this product is chlorophyll, however, these super "green" drinks contain a lot of other critical nutrients important in treating cancer. They also build the immune system and detoxify the body.

SuperGreens from InnerLight can be taken as a "green" drink or capsules. For more information about this product, and what needs to be taken with it, see the "Stage IV"

article.

### 7) Vibe Liquid PLUS Essense Health Blend [required if patient is physically weak]

Vibe is such an important condensed ionic supplement it can be taken indefinitely during treatment (i.e. it can be taken beyond the first month). For cancer patients, start with 1 ounce per day and quickly build up to 4 ounces a day within a week.

[Vibe Vendor](#)

Essense Health Blend, a powdered supplement which should be mixed with fruit juices, includes critical minerals, vitamins, Essential Fatty Acids, iodine, etc. As with Vibe, this is so superb it can be taken indefinitely.

[Essense Health Blend Vendor](#)

### 8) The Hulda Clark herb combo: Black Walnut, Sweet Wormwood and Cloves

This is a superb combination of herbs that not only is a potent cancer fighter, but is also a parasite cleanse. Of the herbs, sweet wormwood is probably the most potent cancer fighter. But all three are required. Since I do not have an article on any of these herbs, I will tell you my preferred vendor for sweet wormwood: Artemisinin. Here is a vendor:

[Sweet Wormwood Vendor](#)

### 9) PolyMVA

PolyMVA is especially for brain cancer, but can be used for any type of cancer. It is recommended that a doctor administer PolyMVA (which is a good thing, but it makes it expensive and makes it hard for many people to get access to the treatment), however, it **can** be administered at home.

There are some supplements that should not be taken with PolyMVA. For example, alpha lipoic acid should not be taken at all (because it is already in the Poly MVA), and Vitamin C should be limited to 250 mg a day. It is necessary to study the supplements used in other treatments you are taking to insure these restrictions are followed (even check what is in your multivitamins). Here is the article on PolyMVA for more information:

[Poly MVA Article](#)

### Checklist 2 of 11: Simple to Use and Inexpensive Treatments

There are several alternative cancer treatments and/or supplements that are so simple to use, and are so inexpensive, and are so beneficial, they are recommended for your treatment.

**1) Coral Calcium** (prefer Barefoot product) as a supplement, **if you are not using it as a treatment** (see above). This product is a superb product in many ways, but perhaps its most important value to a cancer patient is the calcium, magnesium and trace elements it provides. Coral Calcium has a pH of 10-12, meaning it helps make cancer cells alkaline. As a treatment (see above), you use 3 - 4.5 grams a day, however, as a supplement you only need 1.5 grams a day.

However, it is almost a waste of time to take coral calcium supplements unless you

also take Vitamin D supplements and get as much natural sunshine a day as possible. Vitamin D is required for the body to absorb calcium. Vitamin D supplementation should be about 5,000 I.U. per day, plus you should get at least an hour of sunshine a day.

In addition to the magnesium in the coral calcium an extra magnesium citrate supplement should be taken. The dose should be the vendor's recommended dosage. My recommended vendor for magnesium citrate is:

[http://www.msm-msm.com/store/agora.cgi?cart\\_id=%%cart\\_id%%&product=Minerals&user4=Magnesium](http://www.msm-msm.com/store/agora.cgi?cart_id=%%cart_id%%&product=Minerals&user4=Magnesium)

**2) Chlorella and Spirulina** - Start with 5 grams of chlorella a day, and build up to the maximum daily dose recommended by the vendor (diarrhea concerns are the reason for the build-up). Take 10 grams of spirulina a day, or the maximum dose recommended by the vendor, if less than 10 grams a day. Do not overdose on these supplements since they do contain some Vitamin K (which clots blood). See: [Chlorella and Spirulina Article and Vendors](#)

**3) Matthias Rath Cellular Solution (or the Osiecki Cancer Technique)** (Both treat heart disease and cancer) - not to be combined with Protocol, Cantron, Paw Paw or Graviola (e.g. Amazon Factor)

These treatments include:

Vitamin C [see below] and

L-Lysine (3 grams daily),

L-Proline (1.5 grams a day),

L-Arginine (2 grams a day),

Green Tea Extract (or green tea itself - See: [Article on Green Tea](#)),

CoEnzyme Q10 (at least 160 mg a day)

Note: 480 mg of CoQ10 a day is a **treatment**, 160 mg a day is a **supplement** [added for heart disease]

### Checklist 3 of 11: Supplements

**a) Vitamin C** (to avoid diarrhea start with only 1 gram a day, build up to 10 grams a day). **Note:** This supplement cannot be taken with Protocol, Cantron, Paw Paw, Graviola or Amazon Factor Protocol!!

Vitamin C, by itself, has been shown to increase survival time of terminal cancer patients by 6 times or more. It is important to "buy time" to give the other treatments more time to work. Vitamin C is actually a liver metabolite and will also protect the liver.

**[Warning:** When taking Vitamin C with added minerals, such as iodine, potassium or magnesium, do not exceed the vendors maximum recommended dosage.]

### b) Vitamin B12

The combination of Vitamin C and Vitamin B12 is actually a treatment for cancer (the Sister Mary Eymard Poydock, Ph.D. treatment). However, most Vitamin B12 products are worthless for several reasons.

B12 Highly Recommended Vendor:  
<http://www.wonderlabs.com/sublingual-b12/>

**c) MSM** (build up to 8 grams a day)

MSM is critical to reduce inflammation and swelling, to build the cell walls and make them flexible and for chemical reactions in the body.

Most MSM brands contain fillers, added by the manufacturers, that neutralize or impair the effectiveness of MSM. It is critical that you buy a brand that has ZERO FILLERS, even in its manufacture. Here is such a rare vendor:

MSM highly recommended vendor:  
[www.msm-msm.com](http://www.msm-msm.com)

**d) Vitamin E** ( $\alpha$ -tocopherols, 3,000 I.U.) - Do not take with Protocel, Cantron, Paw Paw, Graviola (e.g. Amazon Factor Protocol).

**e) Niacin** (build up to 500 mg a day)

**f) Zinc lozenges** (50-100 mg a day)

**g) A good multi-vitamin** (strong in the B Vitamins and trace minerals) - Warning: Should not be too high in the vitamins not allowed by Protocel, Cantron, Paw Paw and Graviola (e.g. Amazon Factor).

#### **Checklist 4 of 11: At least 3 ADDITIONAL Major Treatments to Kill Cancer Cells**

These are alternative cancer treatments that are not classified as the "strongest" of the Stage III cancer treatments. However, at least three of these items should be chosen and used.

#### **At least 3 ADDITIONAL items taken from this list:**

1) Essiac Tea - one of the good things about Essiac Tea is that it is not only a cancer-fighter, but also a detox agent, especially for the liver and other organs. Essiac Tea used to be a true "Stage IV" cancer treatment. That was back in the days when Rene Caisse was treating cancer patients with **fresh herbs**. If you buy an Essiac Tea today, most likely the herbs have been dehydrated (which makes them far less effective than fresh) and the herbs were picked several months before you bought it. I no longer classify this treatment as one of the "strong" Stage III treatments, but it is still a worthwhile treatment for its detox value. This article lists some of the best Essiac Tea vendors.

[Essiac Tea Article and Vendors](#)

2) Ellagic Acid - there is a vendor that claims to have had very good results with lung cancer using Ellagic Acid. If you have lung cancer, I strongly recommend you contact them at:

[Hope For Cancer](#)

3) Curcumin: You can buy this spice at any food store. Build up to using it several times a day on your foods.

4) Pau d' Arco (Taheebo Tea): I don't know the dosages or a vendor. It is very, very

difficult to make correctly.

5) Parsley drink and/or kale leaves. Kale leaves contain organosulfur and a lot of other anti-cancer compounds. The parsley herb is like a natural multi-vitamin. It includes several key nutrients for cancer patients, such as vitamin B12 and beta carotene. I do not have a recommended vendor, but here is a sample vendor:

[Herbal Remedies](#)

6) Skin Cancer: If you have skin cancer, it is best to use both a topical skin cancer product PLUS several internal products. See my special article on Skin Cancer for skin cancer treatments at:

[Skin Cancer Article](#)

7) Shark liver oil: but **only** if tumors are involved, not a general treatment

**(Checklist 4 continued) For those with more than a year and a half to live, the following treatments may be counted as "major" treatments:**

Laetrile and metabolic therapy are fabulous treatments for those who have over a year and a half to treat their cancer. You might remember that Kelley did not count in his statistics anyone who died within 12-18 months of beginning treatment. Binzel did not count anyone who died within 6-12 months of beginning treatments.

1) Laetrile therapy: Do NOT buy or use laetrile pills, buy the apricot kernels or get whole apricots and remove the almond-looking seed (which is inside of the hard shell). Do NOT use the Binzel diet, but make sure you use all of his supplements. Use the stronger cancer diet mentioned above.

2) Kelley Metabolic Therapy - Dr. Kelley died in early 2005, but he did not like anyone tampering with his treatment. If you choose his treatment then ignore everything on this website and use his website exclusively (see my article on the Kelley Metabolic treatment):

[Article and Link to Dr. Kelley's Website](#)

**(Checklist 4 continued) Other comments**

When people research the internet, and they find a testimonial, they almost instinctively think it is a "major" treatment. It may be, but there are some things that need to be researched before you should consider it a "major" treatment.

First, what "total life" cure rate does it generate for cancer patients in your situation? Thanks to the FDA, this is usually impossible to answer. Thus, it amounts to reading multiple testimonials **that are not related to each other!** and making a judgment call.

Note: just because a treatment selectively kills cancer cells in the laboratory does not mean it is a good alternative cancer treatment. What happens in a laboratory tells nothing about whether it will kill enough cancer cells in the human body!! A laboratory and a human body are two vastly different environments!!

Second, is there a trusted vendor for this product? This is a big issue, especially if you are depending on the testimonials at a vendor site (unfortunately most testimonials are on vendor sites). Vendors have been known to use testimonials of

people who used a product, but the product was purchased from another vendor.

Third, how does the treatment work and how fast does it work? There are some superb treatments, but due to the way they work, it takes too many months for them to have a significant effect.

Fourth, what is the margin of error? In other words, given the variety of quality in vendors, the variability of how the product is treated by vendors and by shippers, how stable is the product under these variable conditions?

#### **Checklist 5 of 11: The Only Optional Checklist (These are Optional Items and are Not Treatments)**

It is the opinion of several key alternative cancer researchers that every cancer patient has a severe infection. These are two optional treatments that deal with treating infections.

1) Stabilized Oxygen or Stabilized Electrolytes. This magnificent product was discovered by Dr. Moises deGuevarra in 1929. It is a chemical that gets oxygen directly into the cells of the body, including the cells harboring virus. See my article on Hydrogen Peroxide for more information. Recommended product: Prime pH: [InnerLight Vendor](#) (Click: Our Products, then Prime pH)

2) Samento plus Noni Concentrate. The combination of Samento (Cat's Claw) plus Noni Concentrate is not only anti-viral, but it is also immune building. It is critical to get the "TAO-Free" variety of Cat's Claw because the TAOs (tetracyclic oxindole alkaloids) in normal Cat's Claw will significantly interfere with the effects of the more important PAOs (pentacyclic oxindole alkaloids), which affect the cellular immune system. Here is a vendor:

[NutraMedix](#) (Buy BOTH Samento and Noni Concentrate liquids)

#### **Checklist 6 of 11: Items For The First Month Only**

These items are optional, but should be used if the cancer patient is weak or has been on chemotherapy. I do not specify how many of them should be used. They are super-fruit juices that quickly build the nutrition in a person.

1) Noni Juice, IF AND ONLY IF, it is a top quality brand, such as Tahitian Noni Juice, and only if a minimum of 16 ounces a day are consumed (prefer 32 ounces a day) (first month only)

2) Mangosteen (at least 12 ounces a day, prefer 25 ounces a day) - recommended products: XanGo or Mangosteen Plus (first month only)

[XanGo Mangosteen Vendor](#)

3) Wolfberry juice - recommended product: Berry Young Juice (80% Ningxia Wolfberry Juice) (first month only)

**[Important Note:** The super-fruit-juices (Noni Juice, Mangosteen and Wolfberry Juice) provide a quick burst of critical nutrients and antioxidants. This may make the patient feel very good, very quickly. But this is a result of flooding the body with nutrients and oxygen (via the antioxidants), not killing cancer cells. Do not think that the cancer is cured in a few weeks just because the patient feels good. All of these

super-fruit-juices do kill cancer cells, but not that quickly.]

### **Checklist 7 of 11: Your Plan MUST Have At Least 3 Treatments To Build the Immune System**

Building the immune system kills cancer cells indirectly. In other words, these items build the parts of the immune system that deal with cancer cells, and then the immune system helps to selectively kill the cancer cells.

For brain cancer, a person should have as many of the immune system building treatments as possible. Even if these substances do not get past the blood-brain barrier (BBB), the white blood cells created by these treatments are guaranteed to get past the BBB!!

For leukemia patients, check with your medical doctor to see if building the white blood cells that deal with cancer is appropriate for your situation. Generally, these treatments should not be a problem because leukocytes (the immature white blood cells created in bone marrow or the lymph system) are the problem with leukemia. These treatments build **mature** white blood cells. Also, for leukemia patients the "greens" portion of the diet is ABSOLUTELY CRITICAL as are the antifungal products.

#### **At least 3 items TOTAL:**

- 1) Organic Germanium [**Recommended**]  
See:  
<http://www.positivehealth.com/permit/Articles/Nutrition/Germanium/chapter3.htm>  
See for vendors: [www.worldwidehealthcenter.net](http://www.worldwidehealthcenter.net) (USA) and [www.seeknatural.co.uk](http://www.seeknatural.co.uk) (UK and Europe)
- 2) IP6 (Inositol hexaphosphate) [**Recommended**]
- 3) Transfer Factor Plus (if not used above)
- 4) MGN3 / MGN-3 (available in the U.S. under the brand name: BioBran)
- 5) An AHCC Supplement: Imppower, ImmunoKinoko, Immune-Assist includes AHCC
- 6) Immune Fx
- 7) Zeolites (heavy metals interfere with the immune system, zeolites remove heavy metals)
- 8) Aloe Immune and/or Advanced Ambrotose, glyconutrient products (see my Stage IV article for information about these two products)
- 9) A Beta Glucan Supplement: Immutol or "Beta-1, 3-D Glucan"
- 10) Moducare (a sterols and sterolins supplement)
- 11) Garlic - whole bulbs or a supplement designed for immune system (use only during active cancer treatment)

There are many other products designed to build the immune system (e.g. Lentinan, PSK, PSP, Coriolan, D-Fraction, RM10, Mushroom Immunity Complex, etc.)!! Be aware that every vendor claims their product is the best and also remember that Cancer Tutor has no lab facilities to test their claims!! MGN-3 or BioBran has a single manufacturer, and has been studied in labs, and is also recommended.

See also the special article on building the immune system:

[Article on Building Immune System](#)

### **Checklist 8 of 11: A Colon Cleanse to Start Your Treatment AND At Least 2 ADDITIONAL Liver Detox Treatments**

**Simultaneous** to your starting your cancer treatment, there are three steps that must be accomplished **in order!**

#### **First, a colon cleanse**

The Jon Barron book has a lot of information about a colon cleanse (starting with Chapter 3). You should do a colon cleanse **before** you do a liver cleanse, so the toxins will have somewhere to go after they are flushed!!! His free, online book is at: <http://jonbarron.org/> (click on: Free Download - requires Adobe Acrobat)

#### **Second, a liver / gallbladder cleanse**

You should do a liver cleanse **every 3 months**, or more often if you feel the need. I will give you three options. You should read all three before deciding on one of them:

ONE from this list (or you can use another high reputation liver cleanse)

See the Jon Barron book on liver flush:

<http://jonbarron.org/>

Also see this superb web site on a liver flush to begin your diet with:

<http://altmedicine.about.com/cs/dietarytherapy/a/LiverFlush.htm>

Regardless of which liver flush you use, I would make sure you include pure lemon juice in natural water. The reasons for this are beyond the scope of this article.

#### **Third, an ongoing liver detox treatment**

In addition to the major treatment plans, the liver must be detoxified so that it does not die from the accumulating toxins generated by the treatment plan. The treatment plan **MUST** include at least 2 treatments that detoxify or cleanse the liver.

#### **At least 2 items taken from this list (#1 and/or #2 are REQUIRED):**

Note: As opposed to the liver cleanse, these treatments are **ongoing** treatments, not occasional treatments.

1) Milk Thistle Extract (Seeds or Fruit), Dandelion Root, and Artichoke [required combination]

[Vendor of this combination](#)

2) Lymph III and Quantum Kidney Complex, both from the same vendor [required]

[Lymph III](#)

[Quantum Kidney Complex](#)

3) Bitter Melon herb

4) Olive Oil

5) Coffee enemas (see Kelley Metabolic therapy for links)

As with the liver cleanse, I would add pure lemon juice in natural water to the liver detox.

### A Note About Coffee Enemas

Several major alternative treatment programs, such as the Kelley Metabolic program, Hulda Clark, the Gerson Treatment, and others, swear by coffee enemas as a REQUIRED part of any alternative treatment. The reason is that coffee enemas open the bile duct and allow the liver to flush toxins, thus protecting the liver. Coffee enemas have been used for many decades. The question is this: do the herbal and other liver detox treatments work just as well as a coffee enema? **This is a hotly debated issue!!** You are on your own to make this decision. I will simply say two things:

- 1) cleaning out the liver is absolutely critical to saving a cancer patient,
- 2) many cancer patients have been cured of cancer, many with a coffee enema, and many without.

### Checklist 9 of 11: Treat the Fungus That Every Cancer Patient Has

While there are many different things that "cause" cancer, in every case a pleomorphic yeast/fungus that thrives in a highly acidic diet, is the final cause of cancer. It is essential in any cancer treatment to take away much of the power of the cancer which comes from these things.

Another reason to deal with these parasites is that they may "feed" on many of the same things that cancer cells feed on, because of their similar anaerobic metabolism. This means some of the cancer-killing nutrients may be diverted to the yeast/fungus and not get to the cancer cells. This theory is verified by the fact that many cancer-killing foods are also antifungal and antiyeast. The faster the yeast/fungus/mould are killed, the faster more cancer-killing nutrients will become available to get to the cancer cells.

### At least 3 of the following antifungal supplements:

Note: If you used tobacco, then pick four antifungal supplements.

Note: If you have leukemia, then pick four or five antifungal supplements and see the book: **Sick and Tired?** by Robert O. Young for an even longer list of antifungal supplements.

### Electromedicine

By far the best anti-microbial "substance" on earth is not a substance at all, but an electromedicine treatment for AIDS / HIV. It is the Bob Beck Protocol. It is actually a "Stage IV" cancer treatment in phase two and sometimes in phase one (you would have to read the "Stage IV" treatment to understand the phases of the treatment).

If you are interested in this treatment, see:

[Bob Beck Protocol](#)

### Supplements

**Note:** One vendor has a single product that contains the first 3 items in this list. While it might be surprising to the reader that this vendor is also mentioned above, note

that the person behind these products is Robert O. Young, PhD, who is also the author of the book **Sick and Tired?** which is a superb resource for information about pH, yeast and fungus. The product is SpectraZyme:

[InnerLight Vendor](#) (Click: Our Products, then Colloidal Capsules)

1) Undecylenic Acid (saturated fatty acid), from dehydrated castor oil

See: [http://www.findarticles.com/p/articles/mi\\_m0FDN/is\\_1\\_7/ai\\_83582819](http://www.findarticles.com/p/articles/mi_m0FDN/is_1_7/ai_83582819)

2) Caprylic Acid (saturated fatty acid)

3) Olive Leaf Extract

4) Whole Leaf Aloe Vera Extract

See: <http://wholeleaf.com/aloeverainformation.html>

5) Oil of Oregano

6) Grapefruit Seed Extract (not to be confused with Grape Seed Extract, which is used for a different reason by cancer patients)

There are other items I could put on this list, but if you substitute for something on this list, make sure it is as potent as the above items.

[required] There is also a superb product to cleanse the body of mycotoxins and other waste products of fungus, yeast and bacteria. It is also an InnerLight product. It is important to rid the body of their waste products. Recommended product:

Mycodetox I AND Mycodetox II:

[Innerlight Vendor](#) (Click: Our Products, then the 2 Colloidal Links)

### **Checklist 10 of 11: Enzymes**

**Note: Any person taking blood thinners should not take any enzyme supplement which has high levels of proteolytic or pancreatic enzymes.**

Dr. William D. Kelley's metabolic therapy was based on key enzymes. Two of these, trypsin and chymotrypsin, were key to stripping proteins from the exterior of cancer cells so that the body's immune system could kill the cancer cells. In recent years even more powerful enzymes have been discovered.

### **At least 2 enzyme packages:**

1a) Vitalzym or

1b) Wobenzyme N

PLUS

2) Barley Power (can be used by people on blood thinning protocols)

Vendors for Vitalzym and Barley Power can be found at:

[Vendors of Vitalzym and Barley Power](#)

Wobenzyme N can be purchased from:

[Vendor of Wobenzyme N - The Way Up](#)  
[Vendor of Wobenzyme N - ZooScape](#)

### **Checklist 11 of 11: The Remission Treatment**

Don't forget the remission treatment mentioned above:

[Article on Remission](#)

### **Other Important Comments**

One checklist that would be helpful is a checklist on removing heavy metals from the body. Heavy metals do significant damage to the immune system. There is a natural heavy metal chelation formula that has been tried and tested in scientific trials using a double blind, placebo controlled trial with 350 people, taking urine and feces samples and analysing them using ICP-MS spectrometers. It was shown to be a natural universal chelator – it is called HMD and can be found at [www.detoxmetals.com](http://www.detoxmetals.com) – it would be wise to also use this with Organic Lavage and Chlorella – see [Ultimate Detox Protocol](#).
