

# Treatment For Stage IV Cancer Patients

by R. Webster Kehr  
Independent Cancer Research Foundation, Inc.

## Important Notes

### Note #1:

Read this article at least once a month. Stage IV cancer is where almost all of the research of the Independent Cancer Research Foundation, Inc. is focused. Developments will hit this web page faster than anywhere else.

### Note #2:

Read this article in its entirety AT LEAST TWICE, even if you think you have found your answer. There will be several important sections in this article that apply to your situation!!

### Note #3:

**NOTE: For those on a very limited budget,** also see this article on inexpensive cancer treatments:

[Inexpensive Cancer Treatments](#)

### Note #4:

For those women who are pregnant, who may be pregnant or who may become pregnant, it is **very important** to read this article:

[Article Regarding Pregnancy and Cancer](#)

### Note #5: How to Search This Website

When you need more information about a particular product or situation (such as a type of cancer), it is easy to search this website. As an example, suppose you want to search for the pages that mention germanium. Just type this into the Google search engine:

site:www.cancertutor.com germanium

Or suppose you want to search for articles that mention lung cancer. In this case you have to use double quotes, thusly:

site:www.cancertutor.com "lung cancer"

## Introduction

Since beginning to research alternative cancer treatments in mid-2002, my approach to treating cancer has changed several times. This is due to both feedback from cancer patients, feedback from vendors who work with cancer patients and feedback from other cancer researchers.

Treating cancer can be compared to putting out a house fire. For example, suppose an electrical appliance in your house catches on fire. As long as only the electrical appliance is on fire, the fire is generally easy to put out. For example, a fire extinguisher can put this kind of fire

out without the need to use a garden hose or call the fire department.

This scenario can be compared to most cancer patients **when they are first diagnosed**. Scores of alternative cancer treatments can cure most cancer cases when they are first diagnosed. Of course, some types of cancer need a fire hose right from the beginning (e.g. squamous cell carcinoma).

However, if the fire spreads to some kitchen cabinets, then a fire extinguisher may not be adequate to put the fire out. A garden hose may be necessary and the person may call the fire department just in case the garden hose is not adequate.

The reality is that if you are reading this article, and you have cancer, or if you are the caregiver of a cancer patient, you or the cancer patient has probably been through damaging orthodox cancer treatments plus have lost many months of treatment time.

This might be compared to a house fire where the fire is already consuming two or more rooms and the roof is on fire. In this case a garden hose is no longer adequate. It is necessary to call the fire department immediately.

Think for a moment about an extensive house fire. The more extensive the fire is, the faster the fire is spreading.

Likewise, the more cancer a cancer patient has, the faster it is spreading, simply by virtue of the number of cancer cells that exist and are dividing.

However, just like a fire in some houses will spread faster than other houses (for example, a fire in a wood frame house will spread faster than a fire in a concrete and metal frame house), some types of cancer spread faster than others.

Thus, to treat advanced cancer you need to know several things:

- 1) How much cancer is in the body,
- 2) Where are the key locations of the cancer (e.g. brain, lungs, bones, etc.),
- 3) What kind of cancer is it (e.g. is it spreading quickly based on the type of cancer),
- 4) What are the tools you have to work with to "put it out."

The last item might be somewhat confusing to the reader. Can't any cancer patient choose any of the "Stage IV" alternative cancer treatments, meaning the fire hoses? The answer is absolutely **NO!**

There are many situations where a specific treatment would be dangerous to use. For example, if the slightest swelling of a tumor, even temporarily, may cause a serious situation, there are many alternative cancer treatments that should not be used, or should be used only under expert supervision.

As another example, with lung cancer (including cancer that has spread to the lungs), if there is congestion, this is almost always the primary concern when treating the cancer, no matter what other concerns there may be. If the cancer patient has to go on oxygen, it may be impossible to save the patient because of how far the cancer has already spread. In this case, only very specific alternative cancer treatments have any chance of being successful.

Another issue is whether the patient is taking any prescription drugs, including chemotherapy or any other prescription drugs. Some alternative cancer treatments cannot be used while a

cancer patient is still taking any type of prescription drugs.

Another issue is bone cancer (including cancer that has spread to the bones). When bones become brittle and start breaking it can create severe depression in the cancer patient, especially if the bones that are breaking are in the spine. This fact will elevate the importance to treat the bone cancer first (though lung cancer that includes congestion is almost always the highest priority).

As other examples, some cancer patients cannot digest or consume supplements (e.g. they are fed through an I.V.). Many alternative cancer treatments require the ability to take and digest supplements.

The point is that there are many issues that affect which alternative cancer treatment(s) can be used in a specific case and which cannot be used. Once this list is known, it then becomes an issue of which one is the best, based on the priorities.

In one individual case, even the slightest swelling would cause potentially fatal problems for the patient (a tumor was wrapped around an artery). This alone eliminated almost all alternative cancer treatments because almost all alternative cancer treatments create **temporary** swelling and congestion. However, the man also had had 5 feet of his colon removed, thus he could not digest supplements very well (fortunately he was not on a feeding tube). That eliminated some of the remaining treatments. But he was also on several powerful pain killers. That eliminated the rest of the powerful alternative cancer treatments. When the analysis was done, there was not a single powerful alternative cancer treatment that was available to him. The only option was to pick a treatment that did not cause any swelling, modify it slightly so more of it could be digested, then add a couple of treatments that are rarely used to insure there was not even the slightest swelling.

There are many factors to consider before a treatment can be chosen. This article will discuss many of these issues, and link to other articles in some cases, which go into more detail if they apply to your situation.

These things are mentioned to prepare you for the fact you are going to have to do a lot of reading. While it is always best to work with a vendor or a clinic, **you should do your homework before (and after) you pick a vendor!!**

A vendor will probably take your business even if they are not the best choice for your situation. This is because the vendor probably doesn't know about other alternative cancer treatments (i.e. they may only know about their treatment) and probably doesn't know which treatment is best for your situation. They will just do the best they can with their treatment. It is up to the patient or their caregiver to do the best they can to pick the best treatment the first time. The purpose of this article is to help them do just that.

---

## Understanding the Four Phases of Treating Cancer

### Phase One - The Fire Hose

**Every alternative cancer treatments needs to have at least one "Stage IV" alternative cancer treatment.** This is the main treatment that puts out the fire. It is what the "fire department" brings to the house fire.

Most of this article is on the "Stage IV" treatments. But remember that every cancer treatment of a "Stage IV" cancer patient needs at least one of these treatments (and usually only one of them).

### Phase Two - Protecting Non-Cancerous Cells and Buying Time

Many cancer patients die because of the spreading of their cancer. However, many other cancer patients die because their non-cancerous cells become so weak and sick that the body simply shuts down.

**Treating cancer must be done on two fronts.** You must work on getting rid of the cancer cells, but at the same time you must protect and strengthen the non-cancerous cells.

Never lose sight of the critical non-cancerous cells. It is these cells which determine how much time you have to deal with the cancer cells. They are what "buy-time" for the cancer treatment to work.

Thus, "buying time," by protecting the non-cancerous cells, can be just as important (and even more important at times) than dealing with the cancer cells.

More is said about this phase below.

### Phase Three - Stopping the Spread of Cancer

There are three things which will help stop the spread of cancer, in addition to the primary cancer treatment a patient is on.

First, is alkalinity. This is discussed in the "Cancer Diet" section of this article. Microbes and cancer cells simply cannot thrive in an alkaline environment.

Second, is oxygen. Things like hydrogen peroxide (e.g. 12 drops of 35% **food grade** hydrogen peroxide a day), stabilized oxygen (e.g. 12 drops of stabilized oxygen), such as Aerobic KO7 (that is "K-Oh-7" not "K-zero-7") can quickly raise the oxygen level in the blood. Chlorine Dioxide is made from stabilized oxygen (i.e. Miracle Mineral Supplement, MMS, which is 28% stabilized oxygen) and may be an even better source of oxygen.

Third, for those whose cancer is in tissue (as opposed to leukemia), the Dr. Matthias Rath treatment is superb at slowing down the spread of cancer, to "buy time" for other treatments to work. Here is an article on the Dr. Rath protocol:

[Dr. Matthias Rath Protocol](#)

**Note:** Dosages for hydrogen peroxide and stabilized oxygen are for a 200 pound person, or above. For those who weigh less than 200 pounds, they may want to take a proportionately lower dose.

### Phase Four - After Your Are In Remission

The purpose of the first three phases is to put the cancer patient into "remission," meaning the symptoms of the cancer are gone. But even if every cancer cell in the person's body is killed, removed, or reverted into normal cells, your treatment is not finished.

Once the cancer patient is in remission, it is quite possible for the cancer to return because they

haven't fixed the original problem that caused the cancer in the first place. Or perhaps the cancer returned because the patient returned to their old lifestyle. Or perhaps everyone thought the cancer was gone, but it wasn't completely gone.

For example, almost all breast cancer cases involve root canals as a causal factor. Thus, if a breast cancer patient does not have their root canal teeth removed by a biological dentist or holistic dentist, their cancer will almost certainly return.

As another example, a cancer patient on the Cesium Chloride Protocol may hit their "cesium limit" (as determined by their vendor) before their cancer is totally gone.

In any case, even when the cancer is "cured," the work is not done. A "remission" treatment is needed to:

- 1) Kill any remaining cancer cells,
- 2) Build the immune system,
- 3) Repair the electrical balance in the cells,
- 4) Flood the body with ionic minerals, and so on.

Many things need to be done after the cancer patient is in "remission." Even those who are able to be treated at a clinic need the remission treatment.

The remission article is linked to below in its own section, but if you want a first glance, here it is:

[Remission Article](#)

### **If You are On Chemotherapy, Other Prescription Drugs and/or Over-The-Counter Drugs**

If you are on ANY prescription drugs, or even over-the-counter drugs, such as aspirin, you should check with your pharmacist or doctor to see if there is a potential problem with using natural foods or natural supplements with your prescription drugs. A problem can occur:

- 1) when one substance **negates** another substance, or
- 2) when one substance **interferes** with another substance, or
- 3) when one substance **enhances** the effectiveness of another.

For example, **enhancing a prescription or over-the-counter drug can be just as dangerous as blocking their actions.** It is impossible for this website to keep track of all possible conflicts. This warning is especially important for drugs that are being used as heart medications (such as hypertension drugs), blood thinners or pain medications (to name but three categories).

Sometimes it is prescription drugs that interfere with alternative medicines. There is one very rare situation where a conflict can be directly fatal: the combination of tranquilizers with hydrazine sulphate.

If you are on a blood thinner, you should not take proteolytic enzymes as part of your alternative cancer treatment. Proteolytic enzymes are also blood thinners.

It is common when talking to a cancer treatment vendor to accidentally forget to mention something. For example, if someone is talking to Larry of Essence of Life and forgets to mention they are on a blood thinner, there could be problems because his complete protocol (as well as most complete protocols) include proteolytic enzymes (also called: pancreatic enzymes). This could happen because the cancer patient, or their representative, didn't know it was important and the vendor forgot to ask. However, it is likely part of the instructions that

come with the protocol.

The point is that a cancer patient, or their representative, should continue to study and read even after the treatment begins. In my dealings with cancer patients I have run into many cases where a dangerous supplement (for the situation) was being used and no one knew about it. This is more likely to happen when a patient, or their representative, designs the treatment. But it can happen with any treatment.

If you are on blood pressure medication you need to buy your own blood pressure monitor. Take your blood pressure at least twice a day. If your blood pressure **drops too low**, quit taking your prescription drug for blood pressure. Continue to monitor your blood pressure. Many alternative cancer treatments contain supplements that lower blood pressure.

Many cancer patients are on more than a dozen prescription drugs. It is difficult, if not impossible, to accurately transition from being on several prescription drugs to a pure alternative cancer treatment.

**Having said all of these things, let's be logical.** If you are Stage IV, the chances of you surviving your cancer without alternative cancer treatments is **VIRTUALLY ZERO**. If you take both prescription drugs and alternative cancer treatments, you are in a paradoxical situation. Here are two of the several possible options:

- 1) the combination can do severe damage and shorten your life or
- 2) the alternative cancer treatment can cure you.

Does it make sense to do the best you can at avoiding conflicts, but at the same time **make sure** you are using an alternative cancer treatment strong enough to **maximize** your chances of survival? The only hope you have of surviving is with alternative cancer treatments. Do the best you can at preventing conflicts, but stick with the potent alternative treatments.

I liken this to a person who is drowning in the middle of a large pond. A person standing on the side of the pond knows they cannot swim to the person in time to save them. The only thing available to the person to throw to the drowning person is a large branch. But the person on the bank thinks about it and says to himself: "If the large branch hits the person on the head it will kill them." That may be true, but if the large branch is not thrown to the person, the person will drown. Thus, the **only** possible way the person can be saved is to throw the large branch.

Likewise, orthodox medicine cannot save a person's life after the cancer has spread beyond what they can cut out. Thus, **the only hope to save the person is with alternative cancer treatments.**

### **If You are Currently On Chemotherapy**

One of the best alternative cancer treatments for those still on chemotherapy is the Cesium Chloride / DMSO Protocol. There seems to be some synergy between chemotherapy and the cesium chloride (and in some cases the DMSO). While cesium chloride generally causes temporary swelling and inflammation, when used with chemotherapy there seems to be little, if any, inflammation and swelling. This treatment is discussed below.

While there are other alternative cancer treatments that can be used with chemotherapy, most cannot be used because the chemotherapy will negate the effects of the alternative cancer treatment.

## If You are Contemplating Chemotherapy

For those who are not on chemotherapy yet, but who are contemplating chemotherapy, there is a chemotherapy treatment, administered by an M.D., which is a very good treatment. It is the Insulin Potentiation Therapy (IPT). It combines **very low doses of chemotherapy with insulin.**

Why do they use very low doses of chemotherapy? The reason is that the insulin opens up the cell membranes of cancer cells so that the chemotherapy will target the cancer cells and leave the healthy cells alone. Because this treatment allows chemotherapy to target cancer cells, very low doses of chemotherapy are used and there are **virtually zero side-effects**. It uses about 1/10th as much chemotherapy as a normal chemotherapy treatment, but more importantly it allows the chemotherapy to target cancer cells, thus eliminating side-effects.

The reason I mention this is because some families of a cancer patient insist the person use a medical doctor and chemotherapy. Fine, use IPT. IPT is one of the orthodox cancer treatments which can cure cancer. Orthodox medicine does not allow its use in most states so you may have to do some traveling.

Here is an article on IPT:  
[Insulin Potentiation Therapy \(IPT\)](#)

There is an even better orthodox cancer treatment than IPT which uses chemotherapy; but it is not allowed in any state. In fact, the last medical doctor to use it was raided and shut down by the FDA.

A link to a list of clinics will be given later in this article.

## When To use Radiation and Surgery

Generally speaking, there is no reason for surgery, however, there are situations where it is critical. These situations are generally when a tumor is blocking, or potentially blocking, the flow of bile or an artery or the flow of some other fluid. In these cases, surgery may be required. Follow the advice of your medical doctors when key fluids in the body may be in danger of being blocked. This includes the total blockage of the colon or stomach.

**Do not depend on alternative cancer treatments to reverse inevitable blockage of key fluids.**

Likewise, generally speaking, there is no justification for radiation. But again, there are times when it is essential. These cases generally involve inflammation and pressure in the brain.

When there is pressure inside the brain, it can literally slow down and eventually block the heart from beating. Obviously, if the heart stops beating, or slows down to the point it is dangerous, this can be fatal.

In these cases, medical doctors will normally give steroids to reduce the swelling. Follow their advice.

They also may recommend radiation to reduce the swelling or inflammation in the brain. In these cases, it is best to follow their advice.

**Do not depend on alternative cancer treatments to reverse existing or potential swelling**

### **and inflammation in the brain.**

In fact, many alternative cancer treatments will **increase** swelling and inflammation in the brain. Be very aware of this issue if you are dealing with brain cancer.

The good news is that there are alternative cancer treatments which will not increase swelling and inflammation in the brain. Discussions on individual alternative cancer treatments will mention which ones do or do not cause additional swelling and inflammation in the brain.

### **For Those With Tumors or Areas of High Concentrations of Cancer Cells (Congestion, Inflammation, Swelling and Blockage)**

While alternative cancer treatments almost always use purely natural substances, most alternative cancer treatments kill cancer cells slowly. As cancer cells are slowly dying, the immune system "attacks" them, which can create temporary inflammation or swelling. The inflammation and swelling is only temporary, but it can cause very dangerous partial blockages or complete blockages of key fluids or other things.

### **This can be a very important issue for many cancer patients.**

It is mainly for this reason that in order to obtain the rank of "Stage IV treatment," on this website, there must be telephone support or a clinic setting. It is necessary for the cancer patient, or their caregiver, to have someone to talk to in order to know what to expect and how to deal with it.

Also, as cancer cells die, they do not always just disappear. In some cases the debris from dead cancer cells is simply "eaten" by surrounding cells. However, in most cases cancer cells are concentrated in several areas of the body and there is simply too much debris for the surrounding cells to "eat." This places a burden on the liver, lymph system, kidneys and perhaps other parts of the body.

This is another reason telephone support or a clinic setting is required.

These two situations can be extremely dangerous, especially for certain types of cancer, such as lung cancer, brain cancer, any cancer of the digestive tract, and a few other situations. Inflammation and/or swelling can create a serious health problem.

MSM (Methyl Sulfonyl Methane) is generally the main supplement that is taken to keep inflammation down.

Also, the V.I.B.E. Machine is another way to help keep inflammation down and in fact helps cancer patients in several different ways (see below). V.I.B.E. Centers are now available to most people in the United States.

But the main way to keep inflammation and swelling down is to use the right treatment for your situation. Several situations will be discussed below.

### **The Cardinal Rules of An Alternative Cancer Treatment**

There are many pieces to the cancer puzzle that are discussed in this article. However, let us talk about the Cardinal Rules when going on an

alternative cancer treatment.

---

### **Cardinal Rule #1: Non-Cancerous Cells Are As Important To Treat As Cancer Cells**

Cancer is very stressful on non-cancerous cells, meaning normal cells. Cancer steals vital nutrients from non-cancerous cells. Cancer steals glucose from non-cancerous cells. In addition, chemotherapy is extremely damaging to non-cancerous cells.

In short, the non-cancerous cells in a cancer patient's body generally need as much attention to details as do the cancer cells.

Think of treating cancer on two different fronts. One "front" is to kill cancer cells or revert them into normal cells. The other "front" is to protect and re-vitalize the non-cancerous cells.

Many, **perhaps most**, cancer patients who die do so because of the damage to their non-cancerous cells. In other words, they die from the damage to their non-cancerous cells **before** the cancer cells kill them.

#### **Dealing with non-cancerous cells can be far more important, in some situations, than dealing with the cancer cells.**

An example of how important this is will now be given.

Many years ago, two-time Nobel Prize winner Linus Pauling, PhD, and an associate, Ewan Cameron, M.D., did a study in Scotland that proved beyond any doubt that Vitamin C, given by I.V., of 10 grams a day, could extend the length of time a terminal cancer patient lived **by six times or more**.

While the alternative cancer treatments of today are far more potent than the Pauling/Cameron protocol, there is something very important to be learned from their study - the concept of "buying time" for a cancer patient. When you protect the non-cancerous cells you will "buy time" for the cancer treatment to work.

To understand what this means, consider what would have happened if the patients in the Pauling/Cameron study **ALSO** took a more potent alternative cancer treatment at the same time. Because these patients lived longer **due to the Vitamin C therapy, the more potent alternative cancer treatment would have had six times longer to work and be effective!!** In other words, **there would have been a much higher probability that the more potent treatment would have cured the cancer because it had six times longer to work due to the vitamin C!!**

This is the concept of using a product that does not cure cancer, but it can extend life and "buy time" for other treatments to work because the treatment protects the non-cancerous cells.

Most people do not have access to taking 10 grams of vitamin C by I.V., but here are some examples of products that can literally extend life and "buy time" for more potent treatments to work, leading to a higher probability of success!!

You do not need to take all of these treatments, but pick at least one plus any others you feel will support your treatment.

### Collect

By a huge, huge margin, **the number one recommended supplement to "buy time" is Collect**. It is a powder that can be mixed with certain types of fruit juices. Use one of the Maxi-Blend powders.

Collect has been shown to "buy time" for even super-advanced cancer patients in hospice! It is actually at the heart of one of the main Stage IV treatments mentioned below, but if you are not on that treatment (the Collect-Budwig Protocol), you need to add Collect to your protocol in most cases.

Collect is a super-nutrient product that literally revives the non-cancerous cells, giving the cancer treatment much more time to deal with the cancer cells.

However, if you are on Protocol(R), Entlev(R), Paw Paw or graviola (e.g. the Amazon Factor Protocol), do **NOT** take Collect. These types of treatments lower ATP energy (in the mitochondria) whereas Collect will raise ATP energy, **thus offsetting these treatments.**

Another treatment which Collect should **not** be added to is the Cesium Chloride Protocol of Essence of Life. Essence of Life has a similar product called Essence (yes, that is the way it is spelled), which can take the place of Collect.

If you use Collect for your "buy time" treatment, build up to at least eight scoops (i.e. four servings) of the powder a day with whatever primary cancer treatment you are using. Use even more scoops for fast-growing cancers and cancers which have spread extensively.

**Note #1:** Collect may not be suitable for people on Hydrazine Sulphate.

**Note #2:** For those who are very weak from their cancer treatment or their cancer and are not on hydrazine sulphate, Collect is a **REQUIRED** supplement. It provides a huge boost in energy. Also, one of the super-nutrient juices, discussed next, is also a **REQUIREMENT**. These people can eat anything they want, and use any Stage IV cancer treatment, but Collect and a super-nutrient fruit juice are required, with a few exceptions!!

Here is the website where it can be purchased (Maxi-Blend):

[Collect.org Website](http://Collect.org)

**An Alternative To Collect For Those Fed By Feeding Tubes or I.V.s**

Collect may not be an option for those being fed through a feeding tube or by I.V. A liquid super-mineral supplement is an excellent substitute. The product is called Vibe. Here is a vendor:

[Vibe Liquid Vendor](#)

### The Super-Nutrient Juices

The super-nutrient fruit juices will add minerals and a lot of key phytonutrients and other nutrients, including glucose. For advanced cancer patients whose non-cancerous cells have been stressed and weakened, one or more of these juices are required.

Get out of the mentality of only thinking about the cancer cells. You need to always be thinking about both the cancer cells and the non-cancerous cells.

Rather than give one product, several will be listed. The patient can pick and choose from these brands of products, or they may find another super-nutrient product or another brand of juice. The important thing is to flood the body with highly dense super-foods or super-supplements:

- 1) Tahitian Noni Juice, (Cancer Tutor is not allowed to link to a vendor)
- 2) XanGo Mangosteen,
- 3) Berry Young Juice, from Young Living (wolfberry or Goji juice) (no link)

These, and similar products, are usually sold through Multi-Level Marketing (MLM) and are usually available locally.

**Important Warning:** Due to the fact that many cancer patients have liver damage, frequently due to chemotherapy, and due to the fact that high doses of these super-fruit juices have been known to contribute to liver damage, doses of each of these three products should not exceed 3 or 4 ounces a day. Those who already have liver damage should avoid these products.

**Important Note:** You may have noticed that the super-fruit juices above (mangosteen, noni and wolfberry juice) are not allowed on the Robert O. Young diet because they contain too much glucose. Actually, these super-fruit juices are all right for a cancer patient. The intent of the Robert O. Young diet is to force a person to avoid foods that feed the cancer cells. The super-fruit juices "feed" the cancer cells with things that can kill them and also protect the non-cancerous cells.

**BOTH the dense mineral supplement (e.g. Collect or Essense) and a super-nutrient fruit juice are required for any advanced cancer patient, with few exceptions.**

### The Budwig Diet, Plus Fish Oil

The Budwig Diet, consisting of organic cottage cheese and flaxseed oil, is the cure for type 2 diabetes. One type 2 diabetes patient started on the Budwig Diet, but quit the treatment within a few weeks **because she gained so much weight!!**

The point to this true story is that the Budwig Diet has high quality oils that will provide an energy boost to the non-cancerous cells of a weak cancer patient.

The Collect-Budwig Protocol and the Bill Henderson Protocol both include the Budwig Diet. The Collect-Budwig also adds fish oils so the cells get the critical long-chain good fats.

No matter what treatment you are on, this is a good treatment to help rebuild the non-cancerous cells. Here is an article on this protocol:

[The Budwig Diet](#)

### Anti-Fungal Supplement

If you read the article on cancer theory, you know that the final step to getting cancer is that a microbe is able to get inside a normal cell and block the Krebs Cycle and Electron Transport Chain, thus turning the cell anaerobic (i.e. cancerous) and highly acidic (via mycotoxins).

Almost all cancer patients have severe microbe infections. It is critical to kill as many microbes as possible as part of your treatment. The preferred treatment to do this during a cancer treatment is the Chlorine Dioxide - DMSO Protocol. Chlorine dioxide is the supplement which cured 75,000 malaria patients.

The cancer protocol of chlorine dioxide also includes DMSO to make it even more effective against cancer. This treatment can be difficult to start, so you may want to start it a couple of weeks after you get your primary treatment going smoothly.

It is critical to understand that the effectiveness of chlorine dioxide will be neutralized by Vitamin C, or any other antioxidant. The term "antioxidant" also includes immune builders!! Be very, very careful what you add to this treatment.

Because both Collect and chlorine dioxide are new products to alternative cancer treatments, it is not known yet whether Collect will interfere with chlorine dioxide. The worst thing that can happen is that the chlorine dioxide will be neutralized by the Collect or Essense. If this is the case, you may want to seek out some other anti-microbial treatment. See the Stage III article for a list of such products.

Here is the article:

[Chlorine Dioxide - DMSO Protocol](#)

### Vitalzym and Barley Power

One of the products in almost all alternative cancer treatment protocols is proteolytic enzymes. Their value in treating cancer was known about more than 50 years ago. Almost everyone uses them because they strip the enzyme coatings around cancer cells which allows the immune system to identify and kill the cancer cells. But remember from above, these enzymes

are also blood thinners.

However, there is also a second type of enzyme supplement: the broad-spectrum enzyme supplement. One such product is called Barley Power, which has practically every important enzyme on earth in it. One of the many key enzymes in barley (and fresh wheatgrass juice) is the critical Cytochrome Oxidase enzyme which is **essential** for cell energy.

Barley Power is an organic "green" product that is cold-processed. The bottom line is that **every cancer patient, on any treatment**, should use Barley Power (or fresh wheatgrass juice). This product does not have high levels of the proteolytic enzymes, thus it is not a blood thinner. However, it may contain Vitamin K, so there may be limits to how much you should take. Use the vendor's maximum dosage. Here is their website:  
<http://www.barleypower.com/>

The combination of a proteolytic enzyme supplement (such as Vitalzym) and the broad-spectrum enzyme supplement is very potent! Here is a source for both products:  
[Vitalzym and Barley Power Vendors](#)

### The "Stage III Supplements and Treatments

For a lot more ideas about Stage III alternative cancer treatment protocols and supplements, to "buy time" for a cancer patient, see the "Stage III" Treatment article. **However, if you plan on adding a "Stage III" treatment to your "Stage IV" Protocol, ask your vendor if there are any conflicts** (by the way, don't bug your vendor too much, they are very busy people, group your questions into one call or email).

Here is the "Stage III" Treatment article:  
[Stage III Treatment Article](#)

### Ideas For Those Who Cannot Take Supplements

For ideas about what cancer patients who cannot eat can do to treat their cancer, see:  
[For Cancer Patients Who Cannot Eat Whole Foods](#)

---

### Cardinal Rule #2: Always Have At Least One True "Stage IV" Alternative Cancer Treatment in Your Protocol

Many times people have sent me the alternative cancer treatment they have designed, either for themselves or someone they are caring for.

**The FIRST thing I do when looking at their protocol is to look for a true "Stage IV" alternative cancer treatment (i.e. usually one of those discussed on this page).**

Without at least one true "Stage IV" treatment the person is not likely to

progress in their treatment.

One of the greatest mistakes a cancer patient (who designs their own treatment) makes is to not have a true "Stage IV" treatment in their protocol. To understand this, you should understand that you cannot put out a major house fire with 10 garden hoses. You need at least one fire hose and several garden hoses.

With cancer you need at least one fire hose, the "Stage IV" treatment.

However, it is equally important **NOT** to combine two "Stage IV" treatments at the same time, except in a clinic setting. This is because each of the "Stage IV" treatments kills the maximum amount of cancer cells which the body can handle. To double the number of cancer cells killed would far exceed the safe number of cancer cells that are killed. The body simply cannot handle that much debris.

**Killing cancer cells is not the problem for alternative cancer treatments because the potent alternative cancer treatments target cancer cells and are capable of killing as many cancer cells as they wish to kill. The problem is safely killing cancer cells!** Dangers can be found in killing too many cancer cells too fast or in situations where temporary inflammation and swelling are created.

A complete protocol for treating cancer will include several things, such as detoxifying agents, immune builders, protecting the liver, etc. This may include one or more Stage III treatments, etc. But a complete protocol will include **EXACTLY ONE** "Stage IV" treatment.

There is one glaring exception to not combining "Stage IV" treatments. Hydrazine sulphate is a substance which is for exceptionally weak cancer patients. Whenever a cancer patient has lost their appetite **due to their cancer**, hydrazine sulphate should be studied. Because hydrazine sulfate (H.S.) does not kill cancer cells, it can be used with any other treatment. The only endorsed vendor of hydrazine sulphate is Essense of Life, the Cesium Chloride / DMSO vendor. However, there are many rules associated with using hydrazine sulfate and this article needs to be studied very carefully:

[Using Hydrazine Sulphate - The Cachexia Treatment](#)

---

**Cardinal Rule #3: The Cancer Treatment Can Only Be as Potent as the "Cancer Diet"**

**A good cancer diet will not only help the non-cancerous cells it can also "starve" the cancer cells. A bad cancer diet can "feed" the cancer cells!!**

As I say many times on this website, fighting cancer is like fighting a fire. While there are several very potent alternative cancer treatments, **NONE OF THEM can fight some kinds of fast spreading cancers without**

### **major outside help.**

Where does that outside help come from: a highly alkaline diet!! Cancer simply cannot survive, thrive and spread in a highly alkaline environment. It is your cancer diet that really controls the "inner terrain" of your body and how hard your cancer will be **able** to fight.

A **bad cancer diet** during a cancer treatment will **FEED** the cancer cells. It is like spraying a house fire with both water [the treatment] and gasoline [the bad diet that feeds the cancer cells].

A **mediocre** cancer diet will not feed the cancer cells, but it won't contribute to the treatment.

While a strong cancer diet is critical for every cancer patient, it is especially critical to have a strong cancer diet when the patient has a fast-spreading cancer. A strong "cancer diet" can stop the spreading of cancer faster than anything else.

Too many cancer patients lose their battle with cancer because the cancer spreads too fast and the treatment, even though the best there was, couldn't keep up with the battle.

The only thing that will control a fast spreading cancer is a superb cancer diet **plus** a superb treatment. If you are serious about surviving a very dangerous type of cancer, such as a glioblastoma or pancreatic cancer, etc, then **you have no choice but to use your cancer diet as a major tool in your treatment. PERIOD!!**

**Having said all of this, cancer patients who are extremely weak from their cancer treatment or their cancer should eat whatever it takes to get their strength and energy back, even meat (but NOT sugar). More will be said about this below in the "buy time" section.**

Be careful with vendor designed cancer diets. Make sure their cancer diet is as strong as one of these two cancer diets.

Your first option is the Brandt Grape Cure. Grapes are alkaline. Grapes are also a superb detox substance. This cancer diet is also a "Stage IV" cancer treatment by itself, **however, the Brandt Grape Cure is not powerful enough to treat very advanced cancer patients.** But it can be used to support (as the cancer diet) the treatments that are strong enough for very advanced cancer patients.

Generally, you cannot combine two Stage IV cancer treatments. However, the Brandt Grape cure is such a superb detox that you can use it with any of the other Stage IV treatments.

The Brandt Grape Cure can be used as the "cancer diet" with cesium chloride, the Bill Henderson Protocol, Amazon Factor Protocol, or any other alternative cancer treatment. See this article: [Brandt Grape Cure](#) (as the cancer diet)

Your second option is the Robert O. Young alkaline diet.

Here is an article that will introduce you to the diet, but the ultimate source is the book **Sick and Tired? Reclaim Your Inner Terrain**, by Robert O. Young, PhD. **Use his 100% solution, NOT his 80% solution (e.g. if a vegetable has a significant amount of glucose in it - don't eat it unless it is part of the treatment!!)**

[Simple Version of Robert O. Young Diet](#)

As noted in the above cancer diet article, **do not eat too high a percentage of green vegetables!** Green vegetables are high in Vitamin K and can cause blood clotting, such as strokes.

You can use the above article to begin your cancer diet, but when you get the time, you need to read the book.

---

#### **Cardinal Rule #4: Work With an Expert**

When you go to a clinic that uses alternative cancer treatments, by definition you are working with an expert. This is always the ideal, but it is rarely possible because insurance companies do not pay for alternative cancer treatments.

The best clinics in the world are in Europe. Germany has the highest concentration of world-class clinics. They range in price from \$20,000 to \$25,000 and up.

Probably the best place in North America to be treated for cancer is the Oasis of Hope Clinic in Mexico. They use treatments which are illegal in the United States because they are so effective. However, you better be prepared to pay \$25,000 or more for their treatment. And don't forget no insurance company will pay a dime of the treatment.

See this article for clinics inside and outside of the U.S.:

[Clinics Webpage](#)

It should also be noted that some excellent clinics want to "stay under the radar" of the FDA, thus they do not want websites such as this one mentioning them. More information about clinics is mentioned below.

Most cancer patients can only afford several hundred dollars a month for a treatment. This means the patient will have to depend on telephone or email support. It is critical to work with an expert. An expert will likely have prior experience with a case similar to yours. Their treatment for a situation like yours may have evolved over the years as they have learned about new treatments and new methods.

In short, do not design your own alternative cancer treatment. Generally your expert will be the person who is selling you your "Stage IV" treatment products. These experts are one of the main criteria for my choice of the

"Stage IV" treatments.

If you want to use a "Stage IV" treatment, but for some reason cannot or will not work with the vendor this website mentions, use Google to try and find another vendor. I have made every effort to find the best of the best for each treatment, but in some cases it was a tough choice, meaning someone else was not far behind the person I chose. I do not like to list two vendors for the same treatment because then people will pester both vendors with questions trying to make up their mind which vendor to use. These people are very busy so I usually only list one of the vendors.

For some treatments (e.g. Amazon Factor Protocol), there is only one vendor.

---

### **Cardinal Rule #5: How NOT To Combine Treatments**

Suppose you are researching the Internet and you see four cancer protocols which look interesting. We will call them:

Protocol #1 - 5 items

Protocol #2 - 4 items

Protocol #3 - 5 items

Protocol #4 - 6 items

I cannot tell you how many times I have seen someone design their own protocol by picking one of the items from each protocol. **WRONG!!**

This is absolutely the wrong thing to do. What you need to do is pick **ONE** of the **COMPLETE** protocols (i.e. ALL of the items) and use that protocol as your main protocol. Note that I said to include ALL of the items in that protocol!!

Then, if you want to add items to this one COMPLETE protocol, you can research whether this addition will interfere with your main protocol.

Protocols are put together to be synergistic. When you do not use a complete protocol you may be missing a major part of your treatment. That is why you need to have a baseline protocol of at least one complete protocol. Then you can ADD to that protocol, but do not take anything away from it.

---

### **Cardinal Rule #6: Using Stage IV Treatments In Sequence**

In some cases, even advanced cancer patients can take care of their cancer with a single treatment. However, sometimes a cancer patient is in such dire condition that it is necessary to use several "Stage IV" cancer treatments in sequence, meaning one after the other.

Here is just one example. Suppose a cancer patient has a fast-growing pancreatic cancer that has already spread to their bones. Here is a

sequence they might go with:

**First**, go to a clinic that uses ozone I.V. to start killing the cancer cells immediately, then

**Second, AFTER** finishing at the clinic, they go with the Cesium Chloride / DMSO Protocol to start protecting their bones with key minerals, until their vendor tells them they have reached their 'cesium limit', then

**Third, AFTER** reaching their 'cesium limit', they go with Collect-Budwig for an additional year. During this year they should continue to take the bone-building minerals which are part of the cesium chloride treatment.

**Fourth**, they go on the Remission Treatment for one or two years.

Notice that these treatments are used in sequence.

**The main cancer treatment should usually last at least a year!!**

However, since some treatments last a very short time (e.g. the Brandt Grape Cure for 6 weeks at a time, etc.), it may be necessary to use several treatments in sequence before starting the remission treatment.

---

### **Cardinal Rule #7: Break the Mental Cycle of Depression, Anger and/or Fear**

While the cancer patient himself or herself is ultimately responsible for their cancer treatment, there are some things only the family and friends of the cancer patient can do. That "thing" is to insure the cancer patient does not lose hope and to remove in their minds all possible fear and anger related to the cancer.

It is absolutely essential to break the cycle of depression, anger and/or fear. To do this the cancer patient must make major changes in their mental attitude. Dr. Lorraine Day says to forgive your enemies, researcher Lothar Hirneise says to take a major trip or move. Some of the German cancer clinics use "Art Therapy" to get the patient's mind off of their cancer and get their mind on being creative.

Whether you take them on a trip, teach them a new craft, or whatever it takes, there is a high correlation between breaking the mental cycle and the ability of the body to cure the cancer.

Family participation in helping break this mental and/or spiritual cycle is important. However, it should be emphasized that the family can do as much damage as be helpful. The entire family needs to know what is going on, and support the actions of the patient, even if they don't believe in alternative medicine. There is **NO room for naysayers around cancer patients!!** For example, putting the cancer patient in a natural treatment clinic in Germany, or moving the patient to another state, is one way to get rid of the naysayers.

### Cardinal Rule #8: Monitor Your Progress!!

A critical part of "Phase One" is knowing whether your alternative cancer treatments are strong enough to win the battle against cancer.

As soon as possible after starting your cancer treatment, you need to determine exactly how much cancer there is in your body. Likewise, from time to time during your treatment you **must know** what progress has been made in reducing the amount of cancer in your body.

While the PET Scan will do that, the PET Scan is an X-Ray and having many X-Rays is definitely not good for a cancer patient.

There are also many different "protein" counters, such as the CA-125. The problem with these is that they are generally not good measures of progress. There are many factors that determine how many key proteins are in a cancer patient's body.

Fortunately, there is an easy way to evaluate how much cancer there is in your body. The test was designed by the late Dr. Navarro of the Philippines and is now administered by his son.

It is a urine test which returns to you a number, generally between 30 and 70. A '49' means you no longer have cancer (statistically speaking). A '50' or above means you do have cancer (statistically speaking).

Some people will want to evaluate their progress every 4 weeks, others every 8 weeks, and so on. Alternative cancer treatments generally do not show results within the first 4 weeks, but if the number goes up, that may be a sign you are not using a strong enough treatment.

Here is information about how to determine how much cancer you have in your body:

[How To Determine How Much Cancer You Have](#)

### Your Homework

Here is your homework - memorize these cardinal rules. The order of these cardinal rules is not important, **all of them are essential.**

### The "Stage IV" Treatments

Of the 300+ alternative cancer treatments, only a few are rated "Stage IV" treatments, meaning they give an advanced cancer patient real hope for survival. Obviously, their chance of survival depends heavily on their condition at the start of the treatment and how strictly they stick to a cancer diet and how strictly they stick to their "Stage IV" treatment.

## The Collect-Budwig Protocol

This is a very new treatment program, however, early results are very, very good.

This treatment was designed to do two key things. First, it was designed to start protecting the non-cancerous cells very, very quickly. Second, it was designed to get rid of cancer cells without creating any kind of inflammation or swelling. In other words, this treatment was designed with very advanced cancer patients in mind.

As an added bonus, this treatment also shrinks tumors very significantly within a few weeks.

Both the Collect powder and the Budwig Diet help protect the non-cancerous cells. Fish oil capsules come with the Collect.

This treatment is highly recommended for lung cancer patients, but it works well on every kind of cancer it has been used on.

The only downside to this treatment is that it comes with weak telephone support, compared to some of the other vendors. Fortunately, the treatment is so simple and safe that telephone support is not that critical

**Cost:** About \$400 a month.

**Advantages:** Works very fast and does not cause any type of inflammation or swelling. It can be used with chemotherapy.

**Disadvantages:** There is little telephone support for this protocol. Also, this is a very new treatment and does not have the track-record of some of the other treatments, but early results are so good it has been placed on this page without hesitation. This treatment requires a person be able to take many supplements.

Here is an article on this protocol:

[Collect-Budwig Protocol](#)

## The Cesium Chloride / DMSO Protocol (i.e. the Essense of Life Protocol)

This is the most flexible and has the overall best long-term track record of any other alternative cancer treatment. It can be taken through the skin (e.g. for those on feeding tubes) or in some cases it can be taken orally. It can be taken by those still on chemotherapy (in fact, in some cases that is preferred), and so on.

In fact, it is the required treatment for those with bone cancer (unless another type of cancer takes precedence) or those still on chemotherapy.

This treatment starts working almost as fast as any other treatment protocol. It is also excellent at shrinking tumors quickly. It also deals with the causes

of many types of pain.

Another advantage to this protocol is that a more generous "cancer diet" is allowed because the cesium chloride and potassium block glucose from getting inside the cancer cells. This means more foods with glucose are allowed on this treatment. The expanded "cancer diet" allows patients to have more nutritious foods during their treatment.

Also, for cachexia patients it should be noted that when using cesium chloride, ATP can be used to block cachexia (ATP converts lactic acid into glucose, thus taking a large burden off the liver). When doing this cachexia is blocked two different ways (the second way is that cesium chloride blocks the cancer cells from making lactic acid). ATP also increases the energy of weak cancer patients almost immediately.

In times past, if you had tumors which might have blocked vital fluids (should they temporarily swell), the cesium chloride treatment was not considered the best treatment because it might have caused a **temporary** increase in the size of tumors. However, new natural substances (and some unnatural substances such as chemotherapy) are now being used to prevent the abnormal swelling of tumors when using cesium chloride.

These new technologies allow cesium chloride to be used in situations where it could not previously be used, which is especially important for those who cannot take supplements. There are very few alternative cancer treatments that can be used when temporary swelling is a potential issue. Now cesium chloride is an option in these cases.

For brain cancer patients, this is a very good treatment because of the experience of the recommended vendor and the new things being combined with the cesium chloride. Work closely with the cesium chloride vendor if you are dealing with brain cancer or any other dangerous cancer.

As with all "Stage IV" protocols, as defined by this website, this treatment comes with a complete protocol to deal with the many aspects a cancer patient needs to deal with, other than just the cancer.

The Cesium Chloride / DMSO Protocol is the **major** alternative cancer treatment that can be done at home that is suitable for those who cannot take supplements. Actually, the ozone RHP treatment also fits into this category, but it is rarely used. It is discussed below.

This treatment is critical to alternative medicine because many oncologists are keeping cancer patients on chemotherapy and radiation far longer than they used to, thus there is a growing need for treatments that do not require the ability to consume and digest supplements.

Another advantage to this treatment is that it can be used with chemotherapy. In fact, chemotherapy and cesium chloride seem synergistic, and when using this combination there is far less inflammation and swelling. But as already mentioned, there are new natural products that are now able to take the place of chemotherapy (in most cases) to keep swelling and

inflammation down.

This treatment comes with excellent telephone support. The recommended vendor for this treatment is Larry of Essence of Life. He has worked with thousands of cancer patients over the past several years.

**It is absolutely essential to use the remission treatment when your vendor tells you to quit taking the cesium chloride (i.e. your vendor has decided you have reached your "cesium limit").**

**Cost:** Between \$600 and \$900 up front, and between \$300 and \$400 per month for refills. Newer technologies, when necessary, will add to this cost.

**Advantages:** Works fast, very long-proven treatment and a vendor with extensive experience with a wide range of situations. This treatment can be taken with chemotherapy.

**Disadvantages:** Some patients can take the cesium chloride internally and thus do not need to use DMSO. The DMSO is a transport for the cesium chloride through the skin for those who cannot tolerate the highly alkaline cesium chloride internally. For those who need to take the DMSO, DMSO may cause body odor which may restrict activities away from home. The body odor **cannot** be detected by the cancer patient.

Here is his website for contact information

[www.worldwidehealthcenter.net](http://www.worldwidehealthcenter.net) and [www.seeknatural.co.uk](http://www.seeknatural.co.uk)

### **Bill Henderson Protocol**

Like the Collect-Budwig Protocol, the Bill Henderson treatment is based on the Budwig Protocol. The Bill Henderson Protocol does not cause nearly as much inflammation and swelling as other treatments, if it creates any at all. Like the Collect-Budwig Protocol, it is a critical treatment of choice for just this reason.

However, in order to use his treatment a person must be able to take pills, meaning supplements. Many people who have been on chemotherapy and radiation are being fed through a tube, an I.V. or their digestive tract has been so damaged their digestive tract is not able to absorb the nutrients in foods and/or supplements. Such people generally cannot use this treatment, though sometimes there are few other options.

Perhaps most importantly it is the only alternative cancer treatment that rebuilds the cells with very important good fatty acids. It uses the Budwig Diet at its core. **Other Stage IV alternative cancer treatments should not be combined with the Budwig Diet because too many cancer cells might be killed.**

To emphasize one of these restrictions, the Bill Henderson Protocol should **NOT** be combined with cesium chloride.

Once the Budwig Diet is started it should **NOT** be stopped until at least one year after the person is in full remission. However, there may be situations

where another treatment has a far better fit for a given situation. In this case, if the other treatment has far more potential to help the cancer patient, it might be worth the risk to stop the Budwig and move to another treatment.

See the remission article below for more information about one way to combine the Budwig Diet with other treatments.

Like all good alternative cancer treatments, the Bill Henderson protocol includes an extremely rigid diet that the cancer patient must follow! Also, Bill has studied many different brands of supplements, it is absolutely critical to use the brands he recommends (he does not sell any supplements or receive any commissions).

**A MAJOR WORD OF WARNING:** If you live outside of the United States, ask Bill Henderson if he knows which of the foods in your country have the necessary sulfur proteins. In many countries it is not known which foods have the key sulfur proteins. This treatment will simply not work without these sulfur proteins!!

Bill Henderson's complete protocol can be found in chapter 5 of his book: **Cancer-Free - Your Guide to Gentle, Non-Toxic Healing**. It is available as an eBook on his website (if you need it immediately) or on Amazon. [Bill Henderson's Book](#)

For those on a tight budget, this treatment is one of the least expensive of all of the "Stage IV" treatments.

**Cost:** Less than \$150 a month (Bill Henderson does not sell any of the products).

**Advantages:** There are really two key things which treat the cancer. First, the cancer diet. Second, the Budwig protocol. The cancer diet works very quickly to start treating the cancer. The cancer diet, and the supplements, "buy time" for the rest of the treatment. It causes little or no inflammation or swelling.

**Disadvantages:** Perhaps the biggest disadvantage of this treatment is that it cannot be combined with many other alternative cancer treatments (e.g. cesium chloride) because of a potential conflict with the actions of the Budwig Diet. **Do not add anything** to the Bill Henderson Protocol without his approval (and don't bug him to death either, read his book).

Here is Bill's website:  
[Bill Henderson Protocol](#)

## Oleander

I have been watching the development of oleander for several years. For a long time you had to make a oleander soup at home, using oleander plants. But now safe oleander pills are available!!

Due to the massive research efforts of Tony Isaacs, and several others, oleander has slowly climbed to a Stage IV level cancer treatment. A cancer

patient no longer has to make the product at home and a reliable and inexpensive vendor is available.

The product comes out of South Africa because it is also used as a cure for AIDS.

In addition to poisoning cancer cells, oleander also helps treat cancer in these ways:

Tremendous immune boosting ability (six times that of the strongest patented immune stimulators)

Inhibition of angiogenesis (the growth of tumors)

Inhibition of the NF-kB factor in cancer cells

Induction of apoptosis, or normal cell death, in cancer cells, and

Induction and enhancement of autophagic cancer cell death (which was tested against pancreatic cancer cells)

In addition, oleander does potentiate chemotherapy and radiation when used as a CAM therapy. It either eliminates or greatly lessens ALL known side effects of chemo and lessens those of radiation (with the lone exception being hair loss when the chemo drug of choice is Cisplatin).

In many cases, a caregiver of a cancer patient wants to put a cancer patient on an alternative cancer treatment, but the cancer patient refuses. Most alternative cancer treatments cannot be disguised. One of the interesting things about the oleander protocol is that a cancer patient can take this treatment without even knowing they are taking a potent alternative cancer treatment! The oleander pills can be added without the cancer patient even realizing it.

For certain kinds of cancer, such as melanoma, squamous cell carcinoma and sarcomas, this treatment **must** be combined with the Chlorine Dioxide / DMSO protocol.

[Melanoma and Squamous Cell Carcinoma article](#)

**Cost:** About \$60 a month for the main product.

**Advantages:** Can be used with chemo and radiation. Very inexpensive. After years of research it is now a highly stable and very effective treatment.

**Disadvantages:** Does require the cancer patient, or their caregiver, to study the Tony Isaacs book (about \$15). This treatment does not treat the non-cancerous cells, thus other protocols must be added for advanced cancer patients to protect the non-cancerous cells.

For details on the treatments, and how to get the Tony Isaacs book, go to this web page:

[Oleander Article](#)

### Amazon Factor Protocol

The Amazon Factor Protocol is another "Stage IV" alternative cancer treatment that is for "healthy Stage IV" patients, meaning patients who can take supplements. It was designed by a PhD who learned about designing

alternative medicine protocols in Japan. Tracy Gibbs, PhD, could not find an American university which taught what he wanted to learn, so he went somewhere else.

The power of this treatment is in a very special graviola plant. This plant is so high in acetogenins (this is the molecule that lowers the ATP energy in a cancer cell to the point that the cancer cell literally falls apart) that it is not necessary to extract them from the plant.

This is good for two reasons. First, with the acetogenins come all of the co-factors of the acetogenin molecules that occur naturally in the plant.

Second, one of the large drug companies owns all of the major patents on the extraction of acetogenins from graviola. Of course, the drug company, which constantly brags about its "high ethics" to shield itself from its Vioxx scandal, does not use these patents because they do not want to cut into their profits by actually curing cancer. You can throw their "high ethics" in the trash can.

The complete protocol includes other ingredients that treat the cancer, such as keeping the lymph system clear, protecting the organs, stripping away the protein coating of cancer cells with enzymes, etc.

This treatment should **NOT** be used by cancer patients who have fast-growing cancers (e.g. glioblastomas), or who have high infestations of microbes (e.g. breast cancer with severe infections, uterine cancer, etc.). This is because with these types of cancer new cancer cells may form faster than the treatment can kill them.

Like most alternative cancer treatments, this treatment will cause temporary swelling of tumors and a temporary increase in lung congestion for those with lung cancer. Because this treatment is not effective when using half-doses, this treatment is **not recommended for brain cancer cases or lung cancer cases where lung congestion has already started!**

For those who have no concern about swelling and inflammation, and who need to "jump start" this treatment, the Protocol treatment is synergistic with this treatment.

This website does not yet have an article on this protocol, but it should be mentioned that a clinical study was done in Malaysia on this product. While only breast cancer patients were used in the study (obviously some of the breast cancer patients had other types of cancer as well), all the patients had been sent home to die and their cancer had already metastasized. The results of this clinical study, and the reputation of graviola, were sufficient to get this protocol rated as "Stage IV."

If you are dealing with breast cancer, and if you do not have a severe microbe infection, see this article to know when this treatment can be used on breast cancer:

[Breast Cancer Article](#)

Amazon Factor should **not** be taken with any alternative cancer treatment

that is advertised as a "pro-oxidant." A pro-oxidant, such as high doses of vitamin C, will neutralize the effect of the acetogenins. Acetogenins lower ATP energy, but pro-oxidants raise ATP energy, thus neutralizing Amazon Factor. Anti-oxidants also should not be used with this product, such as products with a high ORAC rating, except for Protocol or Cantron, which can be added.

Likewise, most kinds of chemotherapy raise ATP energy, and will thus neutralize the effects of Amazon Factor.

The Amazon Factor Protocol should not be used with the V.I.B.E. Machine, which will be discussed below, because the two treatments may offset each other. It should be not used with the Budwig Diet.

In each of the above cases, there is no danger in using Amazon Factor Protocol, the concern is only that the other treatments will neutralize the effectiveness of the graviola.

Amazon Factor should **not** be used by anyone who is pregnant, who may be pregnant or who may become pregnant, because of the way it targets fast-growing cells (which may include fast-growing fetal cells).

This product is not available over the Internet, but information about how to telephone the company can be found on their Internet site. In other words, you have to order their products by telephone.

As with all other "Stage IV" treatments, when the patient is in remission, they should go on the remission treatment mentioned below.

**Cost:** About \$400 a month.

**Advantages:** Only the oleander pills are easier to administer than this treatment.

**Disadvantages:** Should not be used with most kinds of chemotherapy, antioxidants or pro-oxidants, such as high doses of vitamin C. Amazon Factor pills should be taken every 6 hours, 24 hours a day, thus a person must get up early in the morning to take a pill, then go back to bed.

**Links:** Here is the vendor's site:

<http://www.nutranomics.com/> [The Company - ask for this product]

### **The Brandt Grape Cure - Using Black, Red or Purple Grapes**

The Brandt Grape Cure has been around since the early 1920s and was probably used in various forms for hundreds of years before that. It is the oldest cancer treatment that is still commonly used.

The Brandt Grape Cure article (linked to in a moment) talks about two different ways to use this treatment. **First**, by using black, red or purple grapes to create a mush or **Second**, by substituting a vegetable juice for the grapes. **Only the first method, using the black, red or purple grapes, is**

**rated "Stage IV."** The vegetable juice method is only rated Stage III.

The Brandt Grape Cure is considered a "juice fast." What this means is that absolutely no foods or liquids (other than a quality water) are allowed to be used with this treatment. The reason for this is that when a person is on a "juice fast," the cancer cells have no source of food except for the grape mush. This is good because red, black and purple grapes contain more than a dozen cancer-killing nutrients.

In other words, the only thing your cancer cell gets to eat is poison to the cancer cells, but grapes are healthy for non-cancerous cells. Thus, this treatment effectively targets cancer cells (i.e. it only damages cancer cells).

It is not yet known whether this treatment will create any type of swelling, inflammation or congestion, so to be safe, if you would be at risk if there were significant swelling, inflammation or congestion, do not use this treatment. However, it is doubtful it does create swelling, etc. because grapes are a superb detox.

An interesting thing about grape juice is that microbes cannot survive in grape juice for more than a few seconds. Whether the Brandt Grape Cure kills any microbes inside of cancer cells, allowing the cells to revert to being normal, is an unanswered question.

Because of the volume of grapes you will consume, it is absolutely required that you use **organic grapes**. Normal grapes are notorious for having a lot of pesticides put on them.

Regardless of what the Brandt Grape Cure article says, **for Stage IV cancer patients they should go on the "juice fast" for 6 straight weeks.**

After that 6 weeks is over, the cancer patient has two options. First, eat healthy foods for two weeks, then go on the Brandt Grape Cure for another 6 weeks. Then they can go on the remission treatment.

The second option is to go directly to the remission treatment, which means the Bob Beck Protocol, then the Bill Henderson Protocol, etc. See the remission article below.

This is a very proven treatment and is something to seriously consider if you have the will-power.

Remember, substituting vegetable juice for the grapes is **not** considered a "Stage IV" treatment.

**Cost:** Free, because the grapes replace your regular food expenses.

**Advantages:** This treatment has been around for centuries. It comes with its own detox and is simple to use.

**Disadvantages:** Many people cannot obtain the required organic grapes year around. An important thing to keep in mind with the treatment is that it takes 3 or 4 weeks to start to become effective. For those with an estimated

8 weeks to live, or less, this treatment may not work fast enough. For cancer patients who are extremely weak and have already lost a lot of weight, this treatment may not be the right choice because they may need a macrobiotic diet (see the "Cancer Diet" article for more information).

**Link:** There are no vendors to support this treatment, see your orthodox medical doctor if you have symptoms not mentioned in the Brandt Grape Cure article (or simply quit the treatment). Most symptoms, however, will be harmless detox symptoms. Here is the article:

[The Brandt Grape Cure](#)

### Ozone RHP

This treatment is rarely used, probably because people do not believe that pure ozone gas can safely be injected directly into the blood stream. In other words, it is a case of bad information that keeps people from using this treatment.

Or it may be that people don't want to do their own I.V. or injection at home. In any case, this treatment is not used very often. The treatment, however, is one of the rare oxygen treatments that currently can be done at home.

The medical grade equipment is pricy, at \$5,000 or so, but it is a valid "Stage IV" treatment.

As with all "Stage IV" treatments, it is absolutely critical to follow this treatment with the remission treatment mentioned below.

**Cost:** \$5,000 up front, but this includes the pure ozone generator and daily contact with the vendor for the first two months of treatment, and thereafter if needed.

**Advantages:** This is a very effective ozone treatment. Ozone and other oxygen treatments have been around for a long time and have been proven to be very safe and effective. This treatment can be used in cases where the patient cannot take supplements.

**Disadvantages:** Many people do not want to inject ozone gas directly into their bloodstream. Also, because this treatment kills cancer cells, it may cause some inflammation and swelling.

**Link:** Here is an article on the treatment and contact info:

[Ozone RHP Protocol](#)

**[Also contact this site for information about the Malaysia clinic.]**

### The Clinics

Many cancer patients want to be treated at a medical clinic. While this is understandable, and in many cases is a good choice, there are situations where this is not a good idea.

First of all, there are very few clinics (as a percentage of all cancer clinics) in the United States, or anywhere else, including Mexico, that really know how

to treat cancer. To make matters worse, some clinics are more interested in using the most profitable treatments - profitable for them; rather than the most effective treatments - effective for you. This is not just an orthodox medicine issue, it also applies to alternative medicine.

However, there are some clinics this website does endorse. There are other clinics that this website should endorse, but due to a variety of reasons (mostly the lack of time to contact them and learn what they do), this website has not evaluated them.

While the author of this website is not qualified to "judge" medical practitioners, the cold reality is that the author of this website has an obligation to the readers of this website to make the best judgment possible.

However, there are also advantages to being treated at home. The person does not have to travel. Clinics that do not use chemotherapy are rarely covered by insurance but still can be very expensive. The person is at home with family members who care about them, and psychological factors for a cancer patient are very important. On the other hand, travel can be good for a cancer patient for psychological reasons.

**Note:** If the clinic you are considering talks about how well they shrink and eliminate tumors, **avoid that clinic.** See the "Introduction to Alternative Cancer Treatments" article to understand why.

Here is a list of clinics, some of which are endorsed, and others of which are listed. It would be rare when one of these clinics only used one or two treatments. Most of them use several treatments. However, just because a clinic uses several treatments does not mean it is an effective treatment. Just like a raging house fire cannot be put out with 10 garden hoses, a raging case of cancer cannot be put out by 10 mediocre treatments:

[Clinics](#)

When you have completed your treatment at a clinic, it is critical to go on the remission treatment mentioned below, unless you feel you did not make major progress while at the clinic. If you feel you did not make major progress, then pick one of the "Stage IV" treatments that can be done at home.

### Comments on Specific Kinds of Cancer

Sometimes people are very concerned about where their cancer started. **Nothing could be more irrelevant!!** What is important is where the cancer is now and where it is spreading to. In other words, in what location of the body does the cancer present the most immediate danger!!

When the cancer is in multiple locations, it is important to treat the location of the cancer in the most dangerous location first.

Generally, lung cancer is treated first due to the dangers of congestion.

Pancreatic cancer is another type of cancer which is almost always given top priority.

Brain cancer is potentially deadly if there is brain swelling. Thus, in many cases brain cancer is the first cancer a patient should deal with.

The first thing you should do, is list all of the areas there is cancer, then decide which cancer is the most dangerous. This is the decision of the family, after talking to their oncologist (i.e. ask the oncologist which location of the cancer will create the most immediate danger).

In addition to the locations of the cancer, the type of cancer cells can frequently attract the attention of the cancer expert. For example, it doesn't matter where the squamous cell carcinoma is, that type of cancer is always a high priority because of the way it spreads and the speed with which it can spread.

When reading these comments about the locations of cancer cells, and the types of cancer cells, you can get a feel for which location is the most dangerous (for the situation you are dealing with) and thus which location should attract your attention the most (i.e. triage). Of course, the type of cancer cell may override the locations of the cancer.

**Here is a list of types of cancer and the most dangerous types of cancer cells (though there are several dangerous types of cancer cells which will not be discussed):**

### **Lung Cancer and/or Emphysema**

There is a special article on lung cancer and/or emphysema:

[Lung Cancer and/or Emphysema](#)

### **Brain Cancer**

There is a special article on brain cancer:

[Brain Cancer Article](#)

### **Multiple Myeloma (and other Bone Marrow cancers)**

Even though Multiple Myeloma (MM) is a cancer of the bone marrow, it should also be treated as a cancer of the bones. Here is the reason:

- *"The danger associated with this high number of plasma cells stems from the fact that they are malignant and can invade and destroy the surrounding bone and displace the normal blood-producing cells in the marrow. The increased malignant plasma cells can actually dissolve bone, weakening areas of the skeleton and causing a severe osteoporosis-like appearance to the bones."*

[Article on MM](#)

When the bones of an MM patient become brittle and start breaking, it can cause very, very severe mental trauma to the patient, especially if the bones are in the vertebrae.

For this reason, MM, even though it is a bone marrow cancer, needs to be treated as if it were a bone cancer. The recommended treatment for MM and bone cancer is the Cesium Chloride / DMSO Protocol (CC/DP). Larry of Essence of Life is the preferred vendor,

because of his experience in dealing with the minerals needed to protect the bones.

See this article and the next section on bone cancer:

[Links to Other Bone Marrow Cancer Articles](#)

### **Bone Cancer or Any Type of Cancer That Has Spread to the Bones**

Bone cancer creates some unique problems largely because the bones become so brittle that they are very easy to break. When a bone breaks because it is brittle, it can have a severe psychological affect on the cancer patient, **especially if it is a vertebrae**.

For any cancer involving the bones, this website endorses Larry of Essense of Life because his treatment has a high level of minerals. If you deal with Larry, make sure you tell him you are dealing with bone cancer. He will add some additional minerals to his protocol if that is the case (or they may already be in his "package"). Contact information for Larry can be found in the Cesium Chloride / DMSO article mentioned above.

Here is a special article on bone cancer:

[Article on Bone Cancer](#)

### **Pancreatic Cancer or Gallbladder Cancer**

The Collect-Budwig Protocol and the Bill Henderson Protocol are the two recommended treatments for this type of cancer.

There is an article on pancreatic cancer and gallbladder cancer:

[Pancreatic Cancer](#)

### **Colon Cancer, Stomach Cancer, Throat Cancer and Rectal Cancer**

The article on colon cancer actually includes any cancer in the digestive tract; from the throat all the way to the end of the small intestines.

See this article:

[Colon Cancer, Stomach Cancer, Throat Cancer and Rectal Cancers](#)

### **Leukemia and Myelodysplastic Syndrome (MDS)**

Leukemia and MDS are highly associated with a microbe. In fact, some fungal infections have been misdiagnosed as leukemia. Here is an article which goes into this issue; what treatments to use; and has links to other web pages:

[Article and links related to Leukemia and MDS](#)

### **Lymphoma**

There is a special article, with additional links, to lymphoma, especially Non-Hodgkins Lymphoma (NHL):

[Article and links related to Lymphoma](#)

For those with Hodgkins Disease (i.e. Hodgkins Lymphoma), they should read the above article as well. However, the recommended treatment for Hodgkins Disease is the Cesium

Chloride / DMSO Protocol!!

### **Squamous Cell Carcinoma (SCC), or Melanoma - Types of Cancer Cells**

There is an article on melanoma and squamous cell carcinoma:

[Melanoma and Squamous Cell Carcinoma](#)

### **Breast Cancer**

There is an article on breast cancer:

[Breast Cancer](#)

### **Liver Cancer**

The Collect-Budwig Protocol is recommended treatment for liver cancer.

Here is more information on liver cancer:

[Liver Cancer](#)

### **Prostate Cancer**

Use this article for prostate cancer.

### **Adenocarcinomas (type of cancer cell)**

Use this article for [adenocarcinoma](#).

### **Skin Cancer**

There are three articles on this website regarding skin cancer.

The first to be listed below is the "black salve" or Cansema types of treatments (the FDA has effectively shut down Cansema, but a very similar treatment is still available [TumorX]). This treatment is strongly recommended for the more advanced and aggressive types of skin cancer.

[TumorX, Can-X, Colloidal Silver](#)

The second to be discussed is the use of essential oils for moderate types of skin cancer.

[Skin Cancer - Essential Oils](#)

The third is treating minor skin cancers with Vitamin C.

[Skin Cancer - Vitamin C](#)

### **Choriocarcinoma**

If you have the very rare and very dangerous choriocarcinoma [fast growing germ cell/reproductive cell cancers], please contact Larry of Essense of Life (see above).

## Important Issues and Special Situations

### Tumors

"Stage IV" cancer treatments are designed to kill cancer cells, not to shrink tumors. If you kill all of the cancer cells in a tumor, **the tumor is harmless, even if it still the same size as it was in the beginning!**

A tumor is mostly made up of healthy cells. The myth that a tumor is mostly cancer cells is total nonsense. A cancer cell is "undifferentiated," meaning it cannot form tissue or have any other function.

A tumor is almost completely made up of healthy cells. That is why they do biopsies.

Another lie that is spread by orthodox medicine is that biopsies cannot cause cancer to spread. This is also total nonsense. When you cut tissue, such as a tumor, it causes bleeding. Since cancer cells have no function, they are simply sitting loosely among healthy cells. They can be released into the bloodstream when a biopsy is performed.

Because such a small percentage of the cells in a tumor are cancer cells, killing all of the cancer cells in a tumor will not necessarily shrink the tumor. Eventually, the body will shrink the tumor, but it may take a long time.

Nevertheless, some alternative cancer treatments do shrink tumors fairly quickly. If you are dealing with a tumor, it is important to read this article:

[Article on Shrinking Tumors](#)

The V.I.B.E. Machine, discussed below, has a very good reputation for shrinking tumors, if that is important to you.

### Cachexia or Loss of Appetite

Advanced cancer patients sometimes lose a considerable amount of weight and then lose their appetite for eating.

While it is common for a person to lose weight when they switch from a "Western" diet of hamburgers and French Fries to a diet of whole, raw foods, sometimes the loss of weight is caused by an aggressive type of cancer which is so "hungry" for glucose that it literally starts to "eat" the person's muscles and bones.

Over 40% of all cancer patients die of this problem, known as "cachexia" or the "cachexia cycle" or the "lactic acid cycle."

Fortunately, there is a potent product that was designed specifically to break the "cachexia cycle." The product is called hydrazine sulphate or hydrazine sulfate. It is superb at breaking the cachexia cycle.

While cesium chloride breaks the cachexia cycle at the cancer cells (by blocking glucose from entering into the cells), hydrazine sulphate blocks the cachexia cycle in the liver (by blocking the formation of glucose from lactic acid).

When a cancer patient is in this cycle, and they have lost their appetite, the only endorsed

vendor of H.S. is Larry of Essence of Life (mentioned above in the Cesium Chloride / DMSO article). This is mainly because the FDA has shut down most of the vendors who sold high quality hydrazine sulfate. Larry is the only hydrazine sulfate vendor endorsed by this website - period, even if you use another vendor for the main treatment.

By the way, do **NOT** take hydrazine sulfate and DMSO at the same time. It is **not** a dangerous combination, but the DMSO will drag the H.S. into the cancer cells, where it has no beneficial effect. H.S. needs to get to the liver.

The only endorsed protocol for those with cachexia is the Cesium Chloride / DMSO Protocol (see above). There are three reasons for this choice. First, Larry has the only acceptable H.S. product. Second, Larry's cesium chloride treatment is the best choice for bone cancer and bone loss, and cachexia patients almost always have some bone loss. Third, cesium chloride stops the cachexia at the cancer cells. This means the cachexia is being stopped in two different places.

As mentioned above, a new product called ATP blocks the cachexia cycle yet another way, by converting the lactic acid into glucose. Again, the cesium chloride treatment blocks the glucose from getting into the cancer cells. ATP will help protect the liver, which is overburdened by converting lactic acid into glucose.

Reading this article is absolutely critical if cachexia applies to you (there are yet other items important to cachexia patients in this article, but the main purpose of this article is **SAFETY ISSUES!!!**:

[Hydrazine Sulphate Article](#)

### **Treating Cancer is Highly Complex - Do Your Homework!!!**

A Stage IV cancer requires a potent treatment (at least with today's technology). In fact, it may require the combination of several potent treatments.

When combining all of these treatments there are a number of warnings and possible conflicts. It is essential that you do your homework and note every possible conflict. **Key pages relevant to your current treatment need to be read OVER AND OVER AGAIN!!! If you read these articles only once or twice it is a guarantee of encountering problems and possible failure.**

As just one example, hydrazine sulfate requires that you take **NO MORE THAN 250 mg** per day of Vitamin C supplements, which includes what is in multivitamins, but does not include what is in whole foods. Other treatments suggest the use of 3 grams or more of Vitamin C per day. What should you do? You should take no more than 250 mg per day of Vitamin C if you are on hydrazine sulfate.

**You MUST do your homework. You MUST read all the relevant pages every two or three weeks to see if there have been any updates and to refresh your memory. You MUST become the expert!**

If hospitals were allowed to treat your cancer with effective treatments, some nurse would keep track of everything. You don't have that luxury. Either you or someone you know is going to have to do the homework.

With all of that in mind, these pages do change from time to time. You should download the key web pages, but only use the downloaded web pages for a couple of weeks, **THEN**

download them again because the articles may have changed!!

### Remission [VERY IMPORTANT]

Read my lips: **NO SEQUENCE OF ALTERNATIVE CANCER TREATMENTS (including the ones while you are in remission) SHOULD LAST FOR LESS THAN ONE YEAR!!!**

In case you were daydreaming, let me repeat that: **NO SEQUENCE OF ALTERNATIVE CANCER TREATMENTS (including the ones while you are in remission) SHOULD LAST FOR LESS THAN ONE YEAR!!!**

You might wonder why. I thought you would never ask. The reason is that a "Stage IV" treatment is not necessarily designed to build your cells and immune system. The period during remission **MUST** do that or you are likely to have the cancer return. The treatment during remission should also kill off any remaining cancer cells.

There are simply too many cancer patients who cured their cancer with alternative medicine, went into remission, then the cancer came back later. This article is critical for when you are in remission!!

**The Remission Article is VERY Important, and like this article it changes frequently and should be read at least once a month!!**

Here is the key article for those in remission:  
[Remission Article](#)

### Supplements to Consider to Enhance Your Cancer Treatment

An alternative cancer treatment is more than just killing cancer cells. All of the "Stage IV" alternative cancer treatments, and most clinics, include a complete protocol.

A complete protocol can frequently be enhanced by other supplements. Sometimes an alternative cancer treatment can be improved by helping build the immune system, protecting vital organs, keeping the lymph system functioning, killing microbes, cleaning out the waste products of microbes, chelating heavy metals, and so on.

Since the protocols mentioned above do not necessarily deal with every possible part of a complete cancer treatment, these supplements are given as ideas to cover a greater number of issues that cancer patients face.

The article on the treatment for Stage I, II and III cancers has even more ideas and concepts.

Some of the products sold with the protocols mentioned above may cover some of these areas, thus some of these items may not need to be added. The items in this

section are optional, but it is recommended you look at this list, keeping in mind your situation.

### **Essense Health Blend ["Buy Time," Build Nutrition, Immune System]**

First, Essense Health Blend is a superb immune builder which was mentioned above. It is a powdered supplement which should be added to fruit juices. It has key minerals, vitamins, iodine, Essential Fatty Acids, etc. etc.

[Essense Health Blend Vendor](#)

### **SuperGreens or Wheatgrass Juice ["Buy Time," Build Nutrition, Immune System]**

SuperGreens from InnerLight is a superb "greens" product which contains almost 50 different leafs, herbs and other plant extracts. Since this product is a combination of natural leafs, herbs and plant extracts there is no limit to how much you can take.

If you look closely, this product can be taken as a powder, meaning a drink, or as capsules. Most people prefer the capsules. The powder is mainly for people who cannot eat whole foods, such as those who are being fed through a tube.

It is recommended by the vendor to take Prime pH with the SuperGreens. Prime pH is a stabilized oxygen product. This advice is **strongly encouraged**. Since the leafs, herbs and plants have been dehydrated, it is critical to flood the body with oxygen to increase the bioavailability of the SuperGreens.

The instructions for Prime pH is to take 1 drop per 2 ounces of water. However, even with 1 drop per 1 ounce of water you will not taste the alkalinity of the product. It is recommended to take at least 6 drops (in at least 6 ounces of water) of Prime pH for each SuperGreen capsule. Since you should be drinking a lot of natural water every day anyway, you can take a lot of SuperGreen capsules if you wish.

You could also take fresh lemon juice or essential oils to help the bioavailability of the SuperGreens.

For those who choose freshly made wheatgrass juice, it is not necessary to add the Prime pH, lemon juice or essential oils. Wheatgrass juice should never be dehydrated and should be consumed on the same day it is made (the sooner the better).

Here is a vendor of InnerLight products:

[InnerLight Vendor](#)

(You may have to search for this product, they keep changing their website)

### **Lymph III and Quantum Kidney Complex [Protects Lymph, Liver, Kidney]**

These two superb products are from the same vendor and will protect your lymph system, your liver and your kidney's!! Lymph III aids in the detoxification processes of the liver and kidneys, as well as the lymph system, enabling these organs to more effectively and efficiently remove toxins and wastes.

Lymph III, together with the proper ingestion of healthy water, also assists in preventing dehydration and the resultant slowing of lymphatic circulation, drainage

and removal of toxins.

While the Amazon Factor Protocol includes products that perform these functions, if the safety of the organs is a concern of yours, then adding these products will help considerably.

Quantum Kidney Complex contains Agaricus Extract and Cordyceps, both of which protect the kidneys, and other products as well.

[Lymph III](#)

[Quantum Kidney Complex](#)

### **Samento (TOA-Free Cat's Claw) PLUS Noni Concentrate [Infections, Immune System]**

Both of these products are from the same vendor. Infections are a major issue with cancer patients, particularly those who have been on chemotherapy and have had their immune system damaged or destroyed. These two products are required to deal with infections.

It is critical to get the "TAO-Free" variety because the TAOs (tetracyclic oxindole alkaloids) in normal Cat's Claw will significantly interfere with the effects of the more important PAOs (pentacyclic oxindole alkaloids), which affect the cellular immune system.

Diabetics should **NOT** use Noni Concentrate because of its very high glucose level. By the way, the cure for Type II diabetes is on this website (there is a link on the home page - search for 'diabetes').

Here is a vendor, NutraMedix:

[Samento and Noni Concentrate Vendor](#)

### **Glyconutrients [Unique Immune Builder]**

There are 8 critical sugars (monosaccharides) the immune system needs to internally communicate (cell to cell). They are called: glyconutrients. The product Ambrotose has all 8 of the glyconutrients, but it does not have the very rare very-long-chain acemannan form of the mannose sugar. It is this rare very-long-chain glyconutrient that makes Aloe Immune, a competing product, recommended for cancer patients.

The dosage for Aloe Immune is 6 (500mg) pills a day, but start with only 1 (150 mg or 500mg) pill a day and build up quickly.

**Warning:** Some people have a chemical sensitivity to this product (e.g. fever, aches). If this is the case, work with the vendor as to what dosage you can handle.

The vendor does not yet have a web page, so here are their phone numbers. In the U.S. call: 800-807-4779. From outside of the U.S. call: 830-935-4292 (This is a residence so you may get voice mail. Keep calling back, they may not have been able to understand your phone number.).

Mannatech has recently come out with a new product called "Advanced Ambrotose." Since Aloe Immune and Advanced Ambrotose work in somewhat different ways,

both products are actually recommended. Here is a Mannatech vendor:

[Mannatech Vendor](#)

### Polysaccharides and/or Sterols and Sterolins [Immune Building]

The elements of the body's immune system need to communicate with each other in order for the immune system to be effective. Glyconutrients (the monosaccharides discussed above) and polysaccharides are two of the critical things that allow this communication to happen. However, there are other nutrients that have been shown to help build the immune system.

Here are some major products that can build the immune system. Item #1, by itself, is very potent. Items #2 and #3 are very effective together.

- 1) Transfer Factor Plus (the 4Life brand)
- 2) MGN3 / MGN-3 (**available in the U.S. only under the brand name: BioBran**)
- 3) A Beta Glucan Supplement: Immutol or "Beta-1, 3-D Glucan"
- 4) ModuCare (a sterols and sterolins supplement)
- 5) An AHCC Supplement: Imppower, ImmunoKinoko, Immune-Assist includes AHCC
- 6) Immune Fx

### Chlorella and Spirulina ["Buy Time," Immune Building, Chelation, Vitamin B12, etc.]

Chlorella and spirulina also contain polysaccharides, but they are not condensed like the above supplements. These items are chosen for other reasons, namely their chlorophyll, vitamin B12, proteins, chlorella's ability to chelate heavy metals, etc.

Chlorella and spirulina can be taken in high doses, actually unlimited doses (after all they are FOODS, not supplements). You may take from between 5 grams and 50 grams a day of each of these substances. However, a person should build up to their desired level of chlorella to avoid diarrhea (start with 5 grams a day and build up).

Here is a web page (from an ebook on chlorella and spirulina) that has recommended vendors:

[Chlorella and Spirulina Vendors](#)

### Reflexology and Acupuncture [Stimulate the Liver]

For Stage IV patients, it is critical to keep the organs functioning properly. These organs include the liver and kidney, among other organs.

The standard alternative cancer treatment for stimulating the liver is the coffee enema. It is a great aid in the elimination of the liver's toxic wastes.

However, there are two problems with the coffee enema. First, many people do not like to use the coffee enema because it is uncomfortable. Second, regardless of what you may have read, the caffeine in the coffee **WILL** get into the blood stream and shrink the blood vessels and capillaries. This is not good for a cancer patient

because many cancer cells are behind the capillaries (traveling through the veins from the heart).

One solution to this problem is reflexology or acupuncture. These treatment will stimulate the nerves, and may help protect the key organs.

### **Water [Hydration, Cleansing, Lymphatic Circulation]**

Drink plenty of water for detox reasons. A half-gallon a day, or more, is strongly recommended. Alkaline water is recommended, but not required. Tap water is **not** allowed - use natural water or alkaline water. Willard water is perfectly fine, as is distilled water.

Some people recommend adding one teaspoon of sea salt to each gallon of water to allow the cells to better absorb the water.

### **Exercise [Pump Lymph System, Psychological/Reduce Stress]**

Exercise is critical for cancer patients. It puts a stress on the heart and pumps the blood faster. But perhaps more importantly, it pumps the lymph system and is critical to getting the toxins out of the body. The lymph system has no pump (such as the heart pumps the circulatory system), only muscles can pump the lymph system.

Obviously, many people with advanced cancer cannot go for a walk. If going on a walk is not advisable or possible, you should lift a book or something else and do exercises two or three times a day for up to 10 minutes total each time.

### **The V.I.B.E. Machine**

The V.I.B.E. Machine has been mentioned several time above. It energizes cells, can reduce inflammation and swelling and can shrink tumors in some cases.

It is not a required treatment, but it may be very helpful in many cases, especially for leukemia.

New V.I.B.E. Machines are called: Quantum Pulse Machines

Here is the website where you can find the V.I.B.E. Centers:  
[V.I.B.E. / Quantum Pulse Centers](#)

### **Rife Machines [Provide Energy to Cells, Kill Some Microbes]**

**Note:** The Rife machine is a potentially marvelous addition for those who can afford all of the other treatments in this protocol **PLUS** the Rife Machine. Do **NOT** take money from other protocols so you can buy a Rife Machine.

The approximate prices of the two machines discussed in this section are as follows:

- 1) JWLabs (Model A) - about \$1,000
- 2) GB-4000 - about \$2,400

Many Rife Machines do not use the term "Rife" in their name to avoid FDA

persecution. Rather they use the term "frequency generator."

The frequency generator this site recommends should be considered an optional addition to your treatment, for those who can afford it. But it is **not a dangerous addition!** In other words, this piece of equipment can absolutely do you no harm. The machine is called the GB-4000.

This frequency generator is one of the most flexible and powerful frequency generators on the market. The manufacturing company behind the product is very heavy into research. The vendor does not have a web page, but here is his telephone number:  
877-900-8423 [Gary Teal]

Ask Gary to send you a free, no obligation, 2 hour DVD called "The Royal Rife Story." It is a **superb documentary** on the life and works of Royal Rife. Gary will also send you detailed information on the GB-4000.

There is also a generic article on Rife Machines on this website that is very important to read if you are considering a Rife type machine:  
[Generic Article on Rife Machine](#)
