

What is a Stage IV Cancer?

When we talk about a Stage IV cancer in Natural Medicine treatments it is not necessary the same meaning as what the orthodox medical fraternity would use. This is what we mean by Stage IV Cancer:

- 1) Any cancer that has spread throughout the body (from the primary site to any other part of the body such as lungs, liver, gut, brain etc), or
- 2) Cancer patients with fast growing cancers or fast growing tumors, or
- 3) Cancer patients with high fatality cancers (e.g. lung cancer, pancreatic cancer, multiple myeloma, squamous cell carcinoma, melanoma, etc.), or
- 4) Any type of bone cancer, or
- 5) A person has had extensive chemotherapy and/or radiation therapy, or
- 6) Any swelling or inflammation of a tumour could cause a blockage of key fluids, or
- 7) A person has an estimated one year to live or less, or
- 8) Any other situation where orthodox medicine rates it as Stage IV.

All such patients that fit this category of Stage IV MUST read and use the:

STAGE IV CANCER TREATMENTS

Using any other natural treatment protocol for a Stage II or III cancer will not be strong enough to deal with this large load of cancer cells in the body. Time is also of essence as the cancer is spreading quickly and needs to be dealt with.

What Are the Stage IV Cancer Treatments?

The current list of "Stage IV" treatments are the following (in alphabetical order):

- 1) Amazon Factor (**),
- 2) Bill Henderson Protocol (*/**),
- 3) Brandt Grape Cure using red, purple or black grapes (*/+),
- 4) Celect-Budwig Protocol (*),
- 5) Cesium Chloride and DMSO (*/**),
- 6) DPT - DMSO Potentiation Therapy (*/**) – used only with IPT,
- 7) Hydrazine Sulfate (*/**) – for Cachexia patients only,
- 8) IPT - Insulin Potentiation Therapy (*/**) (best if used with DPT),
- 9) IVC - Intravenous Vitamin C Therapy (*/**),
- 10) Oleander (pill form) (*),
- 11) Ozone infusion bottle (*/**),
- 12) Ozone liquid I.V. (*/**),
- 13) Ozone RHP (i.e. Ozone gas I.V.) (*/**)

Codes:

* - These are treatments for which there is an article on this website,

** - These are treatments for which there is expert telephone support from the vendor,

++ - Technical support comes from Cancer Tutor,

*** - These are treatments that are generally given only at clinics

Don't Be Afraid of the Tumor!

Many patients are afraid of the tumor, even though this is not really the enemy – whether the tumor grows a little or shrinks a little this has little bearing on the cure of the patient. Modern orthodox oncologists generally react like a bull to a red rag when they spot a tumor – they aggressively attack it with toxic chemicals or radiation doing a lot of damage to other organs and tissues in the process. So for those that are really concerned about their tumor, it is definitely worth reading this:

How Important is Shrinking Tumors?

Stage III Cancer Treatments

For those who do not fit into any of these categories, there is also an article and treatment protocols for them too. They have to choose the article relating to

STAGE I – III CANCER TREATMENTS

The Treatment Protocols for the Stage I – III Cancer Treatments should suffice for all other cancer patients that do not fit the category of Stage IV, but read the sections carefully to best determine what fits best.

The "Strong Stage III" treatments are the next layer of potency among alternative cancer treatments. They are either not quite strong enough to be considered a "Stage IV" treatment or there is no telephone or clinic support for these treatments. These treatments are generally far easier to work with because they do not kill cancer cells fast enough to create a lot of swelling or inflammation, though there are exceptions.

Here is the current list of "Strong Stage III" treatments (in alphabetical order):

- 1) Bob Beck Protocol (Electromedicine),
- 2) Brandt Grape Cure using carrot juice and beet juice, etc. instead of grapes (* The Raw Food Diet),
- 3) Dr. Lorraine Day, M.D. Diet (a carrot juice treatment) (*),
- 4) Graviola plant products (*),
- 5) Johanna Budwig Flaxseed and Cottage Cheese Protocol (*),
- 6) Paw Paw plant products (a relative of graviola) (* with graviola article),
- 7) PolyMVA (*),
- 8) Protocel or Cantron (Protocel is highly recommended because it is so effective, so easy to use and so inexpensive!!) (*),
- 9) Robert Barefoot Calcium Protocol (*),
- 10) Robert Barefoot Cesium Chloride Protocol (far different than the more potent cesium chloride treatments in the Stage IV section) (*),
- 11) Transfer Factor Plus (the 4Life brand),
- 12) Wheatgrass (Ann Wigmore) or barleygrass treatments (*)

Those on a Limited Budget

For those that are on a limited budget, which usually happens after cancer patients spend lots of money on the wrong orthodox or natural treatments that were not successful, then there are a number of cheap treatment protocols that are also powerful – read this article:

Inexpensive Cancer Treatments
